This Community Health Worker continuing education project is funded by the University of Texas Community Outreach program supported by a grant from the Texas Department of State Health Services (TDSHS), Texas Diabetes Council 2011-030171-001 and in part by the Texas Public Health Training Center, U.S. Department of Health and Human Services, Health Resources & Services Administration (HRSA), Public Health Training Centers Grant Program Award #U68/HP02188-01-00. Its contents are solely the responsibility of the authors and do not necessarily represent the views of TDShS or HRSA.
Your Health Matters: Fitness for Life
Knowledge Questionnaire

Energy Balance
1. If my body burns OUT more calories than I put IN to my body, I will:
   a. Lose weight.
   b. Gain weight.
   c. Maintain my weight.
   d. I don’t know.

2. When starting an exercise program, the following are important aspects:
   a. Frequency.
   b. Intensity.
   c. Time.
   d. Type.
   e. All of the above.
   f. I don’t know.

3. To burn one pound of fat, a person has to burn ______ calories.
   a. 100
   b. 1500
   c. 2500
   d. 3500
   e. I don’t know.

Fitness Basics
4. The minimum amount of moderate physical activity an adult should do each week, in
   bouts of at least 10 minutes, is:
   a. 60 minutes.
   b. 75 minutes.
   c. 150 minutes.
   d. I don’t know.

5. Muscle strength training should be done at least 2 days each week, the following is NOT
   an example of muscle strength training:
   a. Push-ups.
   b. Lifting Weights.
   c. Running.
   d. Yoga.
   e. I don’t know.
Why Fitness is Important

6. The more physical activity you do:
   a. The fewer the health benefits, the better you feel.
   b. The greater the health benefits, the better you feel.
   c. The greater the health benefits, the worse you feel.
   d. The fewer the health benefits, the worse you feel.
   e. I don’t know.

7. The minimum amount of physical activity a child should have daily or on most days, in bouts of at least 15 minutes, is:
   a. 60 minutes.
   b. 75 minutes.
   c. 150 minutes.
   d. I don’t know.

How to Get Started and Stay Active

8. The following is a true statement:
   a. Older people need less exercise.
   b. Exercise makes you tired.
   c. Exercise takes too much time.
   d. You don’t have to be athletic to exercise.
   e. I don’t know.

9. I can be active daily:
   a. At home.
   b. At work.
   c. At play.
   d. In my community.
   e. All of the above.
   f. I don’t know.
Introduction

Your Health Matters: Fitness for Life

1: Introduction

Knowledge Questionnaire

Fitness for Life Program Goals

Expand understanding about why physical activity is important for a healthy life.
Demonstrate how staying active helps reduce risk for chronic diseases.
Empower participants to get and stay active and counsel clients with activity planning strategies.
Provide a curriculum which gives Community Health Workers the knowledge and skills about exercise to impart to their communities.

This curriculum provides the physical activity component to compliment the Your Health Matters!: Nutritious Eating curriculum.

Fitness for Life Learning Objectives

- Describe the obesity epidemic and its implications to health.
- Describe how energy balance influences healthy weight maintenance or weight loss.
- Be familiar with the “FITT” concept.
- Give three examples of how to get and stay active.
- Explain the benefits of exercise.
- Plan ways to reduce screen time.

This curriculum was created by The University of Texas School of Public Health, Brownsville Regional Campus with partial funding from the University of Texas Community Outreach supported by the Texas Department of State Health Services (DSHS).
So why are we here? …

Obesity is an Epidemic

#1 health problem facing American children

A defining public health challenge for the next half-century

The most challenging public health problem ever faced

What is Obesity?

Obesity is not about appearance.

Obesity is a medical diagnosis.

Activity: Calculating Adult BMI

- Step 1: Find individual’s height along left side of chart—use this chart to convert feet and inches to inches only.
- Step 2: Follow height row over to the right until you see the individual’s weight.
- Step 3: Follow this column up to find the individual’s BMI.

Discussion: What do you think? How do you feel? How do people in the community feel when they are told they are obese?
Introduction

Childhood Obesity
BMI-for-age Growth Charts

Measures are different for boys and girls by age. They are not the same as adults since children are still growing. Remember BMI is used by pediatricians to determine the health of a child, it is not based on appearance.

Why Do We Care?

Obesity is a major risk factor for:

- Cardiovascular disease
- High total cholesterol
- High blood pressure
- Type 2 diabetes
- Stroke
- Liver disease
- Gall bladder disease
- Certain cancers
- Osteoporosis
- Depression

2 out of 3 Americans are not active enough.

What’s holding us back?

Centers for Disease Control and Prevention
Introduction

66% of all Americans are overweight with a BMI above 25

5% of all Americans are extremely obese with a BMI above 40

29% of all Americans are obese with a BMI above 30

Children today have a lower life expectancy than their parents

17% of American children (approximately 1 in 5) age 2 to 19 years old are obese

Adult Obesity By Race

For Non-Hispanic Black Americans - 36% are obese
For Hispanic Americans - 29% are obese
For Non-Hispanic White Americans - 24% are obese

Childhood Obesity

For Non-Hispanic Black children age 12 to 19 years old - 49% are obese
For Mexican American children age 12 to 19 years old - 34% are obese
For Non-Hispanic White children age 12 to 19 years old - 31% are obese
What are the health problems created by a sedentary lifestyle?

Why are we so inactive?

Consequences for Obese Individuals
- Poor Physical Health
- Poor Emotional Health
- Poor Social Health

Because we have designed activity out of our lifestyle.

How did we get here?
- The answer is simple:
  - We are eating more.
  - We are moving less.
Toxic Environment:
Inexpensive unhealthy food available everywhere

Toxic Environment: Conflicting Messages

Toxic Environment: Screen Time
More time watching TV, computers, video games
Less time moving

Toxic Environment: Environmental Limitations
Traffic, sidewalks leading to nowhere, underused playgrounds

Toxic Environment: Safety Concerns
No safe place to walk or play

Toxic Environment: Less Physical Education (P.E.) in Schools
Understanding Terms

- **Physical Activity** = bodily movement that expends energy
- **Exercise** = regular, planned, structured physical activity
- **Physical Fitness** = influenced by physical activity and exercise; consists of:
  - Body Composition
  - Muscular Strength
  - Muscular Endurance
  - Cardio Respiratory Endurance
  - Flexibility

"On a scale of 0-10, how confident do you feel that you could talk about physical activity with the community?"

**HOW CONFIDENT ARE YOU?**

Not confident at all | Very confident
---|---
0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10

Community Health Workers can help bring about change with health promotion.

Your Health Matters: Fitness for Life

Energy Balance

What is a calorie?
CALORIE = unit of energy supplied by food
Calorie Control helps with Energy Balance

How do you want to spend your calorie “budget”?

Calories IN to maintain weight:
Different for each person

Estimated calorie needs per day may range from 1,200 to 2,800 depending on sex, age, weight, height, activity level, health conditions and other factors.

Example 1
Sedentary
45 year-old female
5'2" 147 pounds
BMI = 27.0 (overweight)

Calories needed per day: 1,800
to maintain current weight
(not to lose)
Energy Balance

Calories IN to maintain weight: Different for each person

Example 2
Moderately Active
16 year-old female
5'4" 128 pounds
BMI = 22

Calories needed per day: 2,000
to maintain current weight

Example 3
Moderately Active
65 year-old female
5'4" 155 pounds
BMI = 26.5 (overweight)

Calories needed per day: 1,800
to maintain current weight
(not to lose weight!)

Calories OUT: Healthy Weight Loss

100 extra calories/day = 10 pounds/year

About 3,500 calories = 1 pound
Healthy weight loss = 1-2 lbs/wk

Variety
Balance
Moderation
Nutrient Density

Variety
Enjoy foods from all food groups every day
Energy Balance

Key Point Recap

- Calories In vs. Calories Out
- IN: food choices - variety, balance, moderation, nutrient density
- OUT: activity – “FITT”
- Keep track to tip the scale

Let’s move!

*Theory and Techniques for Behavior Change*
PowerPoint
Your Health Matters: Fitness for Life

3: Theory and Techniques for Behavior Change

Behavior Change

- People can change their behavior.
- People can change their behavior without the help of an intervention.
- BUT... interventions can help the change process begin sooner, happen more smoothly and be achieved longer.
- There are proven effective techniques that can assist in behavior change if applied correctly.

Transtheoretical Model

1) Describes behavior change as progression through stages.
2) Broad processes (and specific techniques) associated with behavior change.

* Theory at a Glance

Stages of Change

- **Precontemplation**
  - Not thinking about change.
  - May become angry if pushed about their behavior.
  - Often characterized as resistant or unmotivated.

- **Contemplation**
  - Intends to change in the next six months.
  - Thinking about change.
  - Considering the pros and cons of changing (this can get them stuck in contemplation forever!).

- **Preparation**
  - Intending to make a change in the near future, usually within a month.
  - Have a plan of action in mind.
Stages of Change

- **Action**
  - There has been specific modification of behavior.
  - They are “trying out” the new behavior.

- **Maintenance**
  - Working to prevent relapse.
  - Change in behavior has lasted from 6 months to 5 years (depends on the behavior).

**Relapse**

- Some individuals start the cycle again, although not always back at the first stage.
- For example, an individual may stop wanting to perform the “new” behavior, and go back to contemplation or preparation.
- May be attributed to low motivation and/or use of an inappropriate strategy for change.

**Techniques for Enhance Motivation for Behavior Change**

- These techniques align with a counseling approach called motivational interviewing.
- The techniques alone are not motivational interviewing but can be helpful in supporting behavior change.
- Motivational interviewing is a client-centered counseling style that enhances motivation for change by helping the client clarify and resolve ambivalence about behavior change.
- The goal of motivational interviewing is to create and amplify discrepancy between present behavior and broader goals. In other words, create cognitive dissonance between where one is and where one wants to be.

"Change Talk"

- Communicates respect for participants.
- People are more likely to discuss change when asked vs. being lectured at.
- Engages individuals in their own change process.
- Shown to be effective for helping people move through stages of change with difficult behaviors.
Components of Motivational Strategies

- Affirm
- Reflect
- Summarize

Tools built into Outreach Modules

- We use easy tools to connect with audiences:
  - Decisional Balance
  - Importance, Confidence, & Readiness Rulers
  - Make a Plan
  - Role Modeling

Decisional Balance

What are the... of being physically active for 30 minutes most days of the week?

<table>
<thead>
<tr>
<th>Disadvantages</th>
<th>Advantages</th>
</tr>
</thead>
</table>

Importance Ruler

On a scale of 0-10, how important is it for you to do 30 minutes of physical activity most days of the week?

HOW IMPORTANT IS IT?

0 1 2 3 4 5 6 7 8 9 10

Confidence Ruler

“On a scale of 0-10, how confident do you feel that you could talk about physical activity with the community?”

HOW CONFIDENT ARE YOU?

0 1 2 3 4 5 6 7 8 9 10

Readyness Ruler

“On a scale of 0-10, how ready are you to start being physically active?”

HOW READY ARE YOU?

0 1 2 3 4 5 6 7 8 9 10
Make a plan!

Setting goals is the key to success. Write in sensible, clear and possible to manage goals.

- What type of exercise will you do?
- For how long?
- How many times a week?
- When will you start?

STAGES OF CHANGE ACTIVITY

- I don’t have time. My family is my priority. I never finish what I have to do at home, in the kitchen, or with kids and their homework. After working all day, in the office and at home, I just want to go to bed without thinking about exercising.
  
  Precontemplation

- Three months ago I started walking in the evenings. At first I just did one lap around my neighborhood but now I walk at least 45 minutes most days. I feel great, I have more energy and I’ve lost 10 pounds.
  
  Action

- The doctor told me I have to lose weight to better maintain my diabetes. I’m ready to start. My plan is to go to aerobic classes at church. I haven’t started but I did buy tennis shoes and next week I’m going to the classes with my neighbor.
  
  Preparation

- I’m a single mom with 3 small children. Who is going to care for my kids? I would like to exercise because I know it’s important for my health, but I don’t know how I’m going to have the chance.
  
  Contemplation
• I have been walking with a close friend each morning for 3 years. After the kids leave for school we walk in the neighborhood. This has helped me so much with depression and has given me more energy and I sleep better.

**Maintenance**

Your Health Matters: Fitness for Life

4: Fitness Basics

What is physical activity?

Physical activity =
body movement that uses energy

Benefits of regular activity

- Better health
- Live longer
- Less stress
- Less risk for disease
- Be in shape
- Balance, posture, flexibility
- Feel more energetic

Benefits of regular activity

- Weight management
- Stronger bones, muscles, joints
- Feel better about yourself
- Get around better, independent
- Be with friends, meet new people
- Enjoy yourself and have fun
- Look good

Risks of inactivity

- Premature death
- Heart disease
- Type 2 diabetes
- High blood pressure
- High cholesterol
- Stroke
- Obesity
- Certain cancers
- Osteoporosis
- Depression
- Anxiety
The major muscle groups are used in physical fitness whether it be for muscular strength, muscular endurance, Cardio-Respiratory Endurance, or Flexibility.

<table>
<thead>

<tr>
<td>Abductors, Adductors (muscles to move away from &amp; toward the body) and Gluteus (buttocks)</td>
<td>Side leg raise</td>
</tr>
</tbody>
</table>

Three types of exercise are:

- **Weight-bearing**
- **Resistance**
- **Flexibility**

Weight-bearing Exercise

- Weight-bearing means your feet and legs support your body’s weight. A few examples of weight-bearing exercise are:
  - Walking
  - Hiking
  - Dancing
  - Stair climbing

- Sports like bicycling and swimming are great for your heart and lungs. However, these are not weight-bearing exercise. That’s because you are being held up by something other than your feet and legs, such as the bicycle or the water.

Resistance Exercise

- Resistance means you’re working against the weight of another object. Resistance helps because it strengthens muscle and builds bone. Studies have shown that resistance exercise increases bone density and reduces the risk of fractures.
- Resistance exercise includes:
  - Free weights or weight machines at home or in the gym
  - Resistance tubing that comes in a variety of strengths
  - Water exercises -- any movement done in the water makes your muscles work harder.

Flexibility Exercise

- Flexibility is another important form of exercise. Having flexible joints helps prevent injury.
- Examples of flexibility exercise include these:
  - Regular stretches
  - T’ai chi
  - Yoga
Sample Strength Training routine

- Warm up
  - 5-10 minutes walk briskly, stretch muscles
- Strength training exercises
  - Complete 1-2 sets of 10-12 repetitions of any of the strength training exercises
- Cool down
  - 10-15 minutes of stretching muscles, balance and breathing exercises

Strength Training Tips

- Important to always rotate the days of exercise for major muscle groups. So alternate the days of strength training with the days of cardio or aerobic exercise. One day on, One day off!
- Always breathe! Breathe out as you lift and breathe in as you relax.
- No fast movements-Always complete the movement.
- Always start with a light weight and slowly increase weight. When it is too easy to complete 2 sets of 10-12 repetitions at one weight, increase to the next weight.

Different types of 10-15 min activities focusing on body strength

ACTIVITY (basic strength & aerobic in one)
- 10 – 15 lunges
- 10-15 push ups
- 10-15 sit ups
- 10-15 jumping jacks

All of these work the upper body, abdomen and quadriceps.

Refer to Exercise & Physical Activity Guide in back of section

Fitness Basics

Calories OUT: Activity Guidelines

Intensity
Your level of physical activity

Examples of Activity

LIGHT-INTENSITY
- Groceries shopping
- Cleaning house

MODERATE-INTENSITY
- Biking less than 10 miles per hour
- Light yard work (rake, trim)
- Ballroom/line dancing
- Catch & throw sports
- Water aerobics

Focus on moderate- and vigorous-intensity activities

VIGOROUS-INTENSITY
- Biking more than 10 miles per hour
- Heavy yard work (dig, hoe)
- Aerobics/fast dancing
- Sports with running (soccer, basketball, hockey)
- Jumping rope

Be Active Your Way, U.S. Department of Health and Human Services 2008 Activity Guidelines for Americans

MODERATE-INTENSITY ACTIVITY | Calories used in 1 hour* | Calories used in 30 minutes*
--- | --- | ---
Dancing | 330 | 165
Bicycling (less than 10mph) | 290 | 145
Walking (3½ mph) | 280 | 140
Weight training | 220 | 110
Stretching | 180 | 90

VIGOROUS-INTENSITY ACTIVITY | Calories used in 1 hour* | Calories used in 30 minutes*
--- | --- | ---
Heavy yard work (chop wood) | 440 | 220
Aerobics | 480 | 240
Bicycling (more than 10mph) | 590 | 295
Jogging (5 mph) | 590 | 295
Swimming (slow freestyle laps) | 510 | 255
Basketball | 440 | 220

DAILY LIVING ACTIVITY | Time & Frequency | Pounds lost per year*
--- | --- | ---
Walk to part of the way to/from work/home | 10 min 5X/week | 4
Use the stairs whenever possible | 5 min 5X/week | 2
Take a brisk walk during your lunch break | 10 min 5X/week | 4
Ride stationary bike while reading/listening to music | 10 min 5X/week | 5
Play actively with your children | 15 min 7X/week | 7

Calories OUT: Activity Guidelines

Time
How long you are physically active

Adults: At least 30 minutes most days – at least 10 minutes at a time
Children: At least 60 minutes per day
Your Health Matters: Fitness for Life
Fitness Basics

Guidelines for important health benefits

*Adults need:*

**Aerobic/Cardio Activity**
At least 150 minutes per week

*and*

**Muscle-strengthening & Flexibility Training**
2 days per week

Centers for Disease Control and Prevention

*Children need age-appropriate activity at least 60 minutes per day*

National Association for Sports and Physical Education; Centers for Disease Control and Prevention

Calories OUT: Activity Guidelines

*Type*

**aerobic or strength training**

Some activity is better than none!

Be Active Your Way, U.S. Department of Health and Human Services 2008 Activity Guidelines for Americans; Centers for Disease Control and Prevention; National Heart Lung and Blood Institute

How much activity do you need?

For general health, adults need 30 minutes most days. More intensity and time is needed for weight loss.

**AEROBIC ACTIVITY**

- Moderate-intensity: faster heart beat – can talk easily
- Vigorous-intensity: stronger heart beat – difficult to talk

**HOW MUCH?**

- Moderate-intensity: 150 minutes/week
- Vigorous-intensity: 75 minutes/week
- Periods of 10 minutes or more

Some activity is better than none!

Be Active Your Way, U.S. Department of Health and Human Services 2008 Activity Guidelines for Americans; Centers for Disease Control and Prevention; National Heart Lung and Blood Institute

How much activity do you need?

For general health, adults need strengthening 2 days a week.

**MUSCLE STRENGTH TRAINING**

- Makes muscles stronger
- Keeps muscle tissue lean
- Examples: lift weights, push-ups, yoga

**HOW MUCH?**

- 2 days or more per week
- Include all major muscle groups: legs, hips, back, chest, stomach (abs), shoulders, arms
- 10-15 repetitions

Avoiding Injury

To stay safe while exercising:

- Start slowly and build up.
- Learn what’s right for you.
- Choose activities that fit your fitness level.
- As you become more active, add more time to activities before switching to different ones.
- Use the right equipment and gear.
- Choose a safe place to exercise.
- If you have a health problem, see your doctor.
Make Activity Part of Your Life

- Plan your activity for the week.
- Find the time that works best for you.
- Choose activities you like that fit into your life.
- Be active with friends and family.
- Every bit of activity adds up—doing something is better than doing nothing.
- If you’re just getting started, work your way up.

Activity: Brainstorming

- Name three reasons that being physically active is fun.
- Name three ways of adding physical activity into family’s daily lives.
- Name three ways to free you and your family from watching so much TV.

Keep Track Each Week

Refer to back of section

Let’s move!

10-minute Activity Break

Fitness Basics

Key Point Recap

- Choose moderate-intensity or vigorous-intensity activities, or a mix.
- Do at least 150 minutes each week of aerobic activity.
- Also do muscle strengthening and flexibility at least two days per week.
- Start slow and strive to double your weekly time for more health benefits.

How to Get Started and Stay Active
PowerPoint
Your Everyday Guide

from the National Institute on Aging

Exercise & Physical Activity

Go4Life
sample exercises
Regular endurance exercise has helped Tom stay healthy after major heart surgery:

“At age 45 I had quadruple bypass surgery. I was shocked because I was so young. Those months after my surgery are a blur to me now. After several months of cardiac rehab, I knew my heart health was in my hands. So, now I run regularly at my neighborhood YMCA — around the track in nice weather and on the treadmill during the winter. I admit I was nervous at first to push myself. I worried I might do more harm than good. But, it’s been 12 years and I feel great! This year, I will celebrate my daughter’s graduation from college, continue to root for the Aggies, and maybe even teach my wife to play golf. I believe exercise has made all of that possible for me.”
How to Improve Your Endurance

Endurance exercises are activities — walking, jogging, swimming, raking, sweeping, dancing, playing tennis — that increase your heart rate and breathing for an extended period of time. They will make it easier for you to walk farther, faster, or uphill. They also should make everyday activities such as gardening, shopping, or playing a sport easier.

How Much, How Often

Refer to your starting goals, and build up your endurance gradually. If you haven’t been active for a long time, it’s especially important to work your way up over time. It may take a while to go from a longstanding inactive lifestyle to doing some of the activities in this section. For example, start out with 5 or 10 minutes at a time, and then build up to at least 30 minutes of moderate-intensity endurance activity. Doing less than 10 minutes at a time won’t give you the desired heart and lung benefits.

Try to build up to at least 30 minutes of moderate-intensity endurance activity on most or all days of the week. Every day is best. Remember, though, that these are goals, not rules. Some people will be able to do more.

Counting Your Steps

Step counters can help you keep track of your endurance activity, set goals, and measure progress. Most inactive people get fewer than 5,000 steps a day, and some very inactive people get only 2,000 steps a day.

Wear the step counter for a few days to see how you’re doing. You can use the Endurance Daily Record on page 105 to record your steps. If you get:

- Fewer than 5,000 steps a day, gradually try to add 3,000 to 4,000 more steps a day.
- About 8,000 steps a day, you’re probably meeting the recommended activity target.
- 10,000 or more steps a day, you can be confident that you’re getting an adequate amount of endurance activity.
- 10,000 steps a day comfortably, try for 15,000 steps a day, which would put you in the high-activity group.
Others, however, may not be able to exercise for 30 minutes at a time. It’s important to set realistic goals based on your own health and abilities.

Safety

Listen to your body. Is the activity making you feel unwell or too tired? Endurance activities should not make you breathe so hard that you can’t talk. They should not cause dizziness, chest pain or pressure, or a feeling like heartburn.

Do a little light activity, such as easy walking, before and after your endurance activities to warm up and cool down.

As you get older, you may not feel thirsty even though your body needs fluids. Be sure to drink liquids when doing any activity that makes you sweat. By the time you notice you are thirsty, you probably are already low on fluid. This guideline is important year round, but it’s especially important in hot weather. If your doctor has told you to limit your fluids, be sure to check before increasing the amount of fluid you drink while exercising. For example, people with congestive heart failure or kidney disease may need to limit fluids.

Older adults can be affected by heat and cold more than others. In extreme cases, too much heat can cause heat stroke, and very cold temperatures can lead to a dangerous drop in body temperature. If you are going to be outdoors, dress in layers so you can add or remove clothes as needed. When it’s not possible to be outdoors, you may want to try indoor activities:

• If you have stairs at home, go up and down the steps a few times in a row.
• Walk at the mall or grocery store.
• Go for a swim at your local fitness or recreation center.

Whatever activity you choose, stay safe. To prevent injuries, be sure to use safety equipment. For example, wear a helmet when bicycling. When you’re walking, watch out for low-hanging branches and uneven sidewalks. Walk during the day or in well-lit areas at night, and be aware of your surroundings. Ask someone to go with you. Wear the proper shoes (see page 22).

Quick Tip

Some people are afraid to exercise after a heart attack. But regular physical activity can help reduce your chances of having another heart attack.

If you’ve had a heart attack, talk with your doctor to be sure you’re following a safe, effective physical activity program. Ask about cardiac rehab programs, which include exercise, education, and counseling to help you return to an active life.

Making it REAL!

Walking 2 miles a day at the mall will help you keep up with your grandchildren during a trip to the park.

Go Here for More Info

For more about drinking enough fluids, see page 97.
Progressing

When you’re ready to do more, build up the amount of time you spend doing endurance activities first, then build up the difficulty of your activities. For example, gradually increase your time to 30 minutes over several days to weeks (or even months, depending on your condition) by walking longer distances. Then walk more briskly or up steeper hills. See page 13 for more examples of physical activities that build endurance. To record your activities, use the Endurance Daily Record on page 105.

Ways to Gauge Your Effort

The amount of effort you need to do an activity will depend on your starting point, including your fitness level, how strong you are, and how active you’ve been. For example, walking a mile in 15 minutes will be a lot easier for someone who does it every day compared with someone who has never done it. You can use these informal guidelines to estimate how much effort you are putting into your endurance activities:

- Brisk walking is an example of moderate activity, while jogging is a vigorous activity.
- Talking is easy during moderate activity. During vigorous activity, talking is difficult.
- If you tend to sweat, you probably won’t sweat during light activity (except on hot days). You will sweat during vigorous or sustained moderate activity. Remember to drink fluids even if you don’t sweat.

One doctor who specializes in exercise for older adults tells her patients the following about how hard they should work during endurance activities: “If you can’t talk while you’re exercising, it’s too difficult. If you can sing a song, it’s too easy!”
make it affordable

Exercising at home is just one way to be active. We feature it because most older people can do it, but you also might try Bonita’s example:

“I’m 69 and live on my Social Security income. My kids try to spoil me, but I’d rather do things on my own as much as possible. When looking for a fitness center where I could use strength-building equipment, I bargained the owner down to a monthly fee that I could afford. I started with 1-pound weights and gradually moved on to heavier weights. I also added stretching to my routine. I’ve always been active, but never as much as I am now. Joining the fitness center has done me a world of good. The owner of my club holds me up as an example, and my family is so proud of me.”
How to Improve Your Strength

Even very small changes in muscle strength can make a real difference in function, especially in people who have already lost a lot of muscle. An increase in muscle that you can’t even see can make it easier to do everyday things like get up from a chair, climb stairs, carry groceries, open jars, and even play with your grandchildren. Lower-body strength exercises also will improve your balance.

About Strength Exercises

To do most of the strength exercises in this book, you need to lift or push weights. You can use weights, resistance bands, or common objects from your home. Or, you can use the strength-training equipment at a fitness center or gym. Start with light weights and gradually increase the amount of weight you use.

How Much, How Often

Try to do strength exercises for all of your major muscle groups on 2 or more days per week for 30-minute sessions each, but don’t exercise the same muscle group on any 2 days in a row. (Use the Weekly Exercise and Physical Activity Plan on page 104.)

- Depending on your condition, you might need to start out using 1- or 2-pound weights, or no weight at all. Your body needs to get used to strength exercises.
- Use a light weight the first week, then gradually add more weight. Starting out with weights that are too heavy can cause injuries.
Gradually add more weight in order to benefit from strength exercises. You need to challenge your muscles to get the most benefit from strength exercises. The Progressing section on page 43 will tell you how.

It should feel somewhere between hard and very hard for you to lift or push the weight. It shouldn’t feel very, very hard. If you can’t lift or push a weight 8 times in a row, it’s too heavy for you. Reduce the amount of weight.

Take 3 seconds to lift or push a weight into place, hold the position for 1 second, and take another 3 seconds to return to your starting position. Don’t let the weight drop; returning it slowly is very important.

Try to do 10 to 15 repetitions for each exercise. Think of this as a goal. If you can’t do that many at first, do as many as you can. You may be able to build up to this goal over time.

Safety

Talk with your doctor if you are unsure about doing a particular exercise. For example, if you’ve had hip or back surgery, talk about which exercises might be best for you.

Don’t hold your breath during strength exercises. Holding your breath while straining can cause changes in blood pressure. This is especially true for people with heart disease.

Breathe regularly. Breathe in slowly through your nose and breathe out slowly through your mouth. If this is not comfortable or possible, breathe in and out through either your nose or mouth.

Breathe out as you lift or push, and breathe in as you relax. For example, if you’re doing leg lifts, breathe out as you lift your leg, and breathe in as you lower it. This may not feel natural at first, and you probably will have to think about it for a while as you do it.

Proper form and safety go hand-in-hand. For some exercises, you may want to start alternating arms and work your way up to using both arms at the same time. If it is difficult for you to hold hand weights, try using wrist weights.

To prevent injury, don’t jerk or thrust weights into position. Use smooth, steady movements.

Avoid “locking” your arm and leg joints in a tightly straightened position. To straighten your knees, tighten your thigh muscles. This will lift your kneecaps and protect them.

Quick Tip

A repetition, or rep, is one complete movement of an exercise, and a set is one group of reps. In this guide, a set of strength exercises is 10 to 15 repetitions. You can use the Strength and Balance Daily Record on page 106 to keep track of the number of strength exercises you do.

Making It REAL!

Want to be able to lift your carry-on bag into the overhead bin of the airplane or get in and out of the car more easily? Keep doing those strength exercises, and you’ll get there.
For many of the sample exercises in this guide, you will need to use a chair. Choose a sturdy chair that is stable enough to support your weight when seated or when holding on during the exercise.

Muscle soreness lasting a few days and slight fatigue are normal after muscle-building exercises, at least at first. After doing these exercises for a few weeks, you will probably not be sore after your workout.

### Progressing

Muscle strength is progressive over time. Gradually increase the amount of weight you use to build strength. When you can do 2 sets of 10 to 15 repetitions easily, increase the amount of weight at your next session.

Here’s an example of how to progress gradually: Start out with a weight that you can lift only 8 times. Keep using that weight until you become strong enough to lift it easily 10 to 15 times. When you can do 2 sets of 10 to 15 repetitions easily, add more weight so that, again, you can lift it only 8 times. Keep repeating until you reach your goal, and then maintain that level as long as you can.

### QUICK TIP

Challenge yourself, but listen to your body, and use common sense when you exercise.

- If you feel sick or have pain during or after exercise, you’re doing too much.
- Exhaustion, sore joints, and painful muscle pulling mean you’re overdoing it. None of the exercises should cause severe pain.
- Over-exercising can cause injury, which may lead to quitting altogether. A steady rate of progress is the best approach.
Resistance bands are stretchy elastic bands that come in several strengths, from light to heavy. You can use them in some strength exercises instead of weights.

Wrapping a resistance band

1. Lay the band flat in your hand with the end toward your pinky finger.
2. Wrap the long end of the band around the back of your hand.

TIP

If you are a beginner, try exercising without the band until you are comfortable, then add the band. Choose a light band if you are just starting to exercise, and move on to a stronger band when you can do 2 sets of 10 to 15 repetitions easily. Hold on to the band tightly (some bands have handles), or wrap it around your hand or foot to keep it from slipping and causing possible injury. Do the exercises in a slow, controlled manner, and don’t let the band snap back.
Working with Weights

You don’t have to go out and buy weights for strength exercises. Find something you can hold on to easily. For example, you can make your own weights from unbreakable household items:

- Fill a plastic milk jug with sand or water and tape the opening securely closed.
- Fill a sock with dried beans, and tie up the open end.
- Use common grocery items, such as bags of rice, vegetable or soup cans, or bottled water.

Hand Grip

This simple exercise should help if you have trouble picking things up or holding on to them. It also will help you open things like that pickle jar more easily. You can even do this exercise while reading or watching TV.

1. Hold a tennis ball or other small rubber or foam ball in one hand.
2. Slowly squeeze the ball as hard as you can and hold it for 3-5 seconds.
3. Relax the squeeze slowly.
4. Repeat 10-15 times.
5. Repeat 10-15 times with other hand.
6. Repeat 10-15 times more with each hand.
Wrist Curl

1. Rest your forearm on the arm of a sturdy chair with your hand over the edge.
2. Hold weight with palm facing upward.
3. Slowly bend your wrist up and down.
4. Repeat 10-15 times.
5. Repeat with other hand 10-15 times.
6. Repeat 10-15 more times with each hand.

This exercise will strengthen your wrists. It also will help ensure good form and prevent injury when you do upper body strength exercises.
This exercise will strengthen your shoulders and arms. It should make swimming and other activities such as lifting and carrying grandchildren easier.

Overhead Arm Raise

1. You can do this exercise while standing or sitting in a sturdy, armless chair.
2. Keep your feet flat on the floor, shoulder-width apart.
3. Hold weights at your sides at shoulder height with palms facing forward. Breathe in slowly.
4. Slowly breathe out as you raise both arms up over your head keeping your elbows slightly bent.
5. Hold the position for 1 second.
6. Breathe in as you slowly lower your arms.
7. Repeat 10-15 times.
8. Rest; then repeat 10-15 more times.

**TIP**
As you progress, use a heavier weight and alternate arms until you can lift the weight comfortably with both arms.
1. Stand with your feet shoulder-width apart.
2. Hold weights straight down at your sides, with palms facing backward.
3. Keeping them straight, breathe out as you raise both arms in front of you to shoulder height.
4. Hold the position for 1 second.
5. Breathe in as you slowly lower arms.
6. Repeat 10-15 times.
7. Rest; then repeat 10-15 more times.

**TIP**
As you progress, use a heavier weight and alternate arms until you can lift the weight comfortably with both arms.

This exercise for your shoulders can help you put things up on a shelf or take them down more easily.
This exercise will strengthen your shoulders and make lifting groceries easier.

**Side Arm Raise**

1. You can do this exercise while standing or sitting in a sturdy, armless chair.

2. Keep your feet flat on the floor, shoulder-width apart.

3. Hold hand weights straight down at your sides with palms facing inward. Breathe in slowly.

4. Slowly breathe out as you raise both arms to the side, shoulder height.

5. Hold the position for 1 second.

6. Breathe in as you slowly lower your arms.

7. Repeat 10-15 times.

8. Rest; then repeat 10-15 more times.

**TIP**

As you progress, use a heavier weight and alternate arms until you can lift the weight comfortably with both arms.
**Arm Curl**

1. Stand with your feet shoulder-width apart.
2. Hold weights straight down at your sides, palms facing forward. Breathe in slowly.
3. Breathe out as you slowly bend your elbows and lift weights toward chest. Keep elbows at your sides.
4. Hold the position for 1 second.
5. Breathe in as you slowly lower your arms.
6. Repeat 10-15 times.
7. Rest; then repeat 10-15 more times.

**TIP**

As you progress, use a heavier weight and alternate arms until you can lift the weight comfortably with both arms.

After a few weeks of doing this exercise for your upper arm muscles, lifting that gallon of milk will be much easier.
This variation of the Arm Curl uses a resistance band instead of weights. (See Working with a Resistance Band on page 44.)

1. Sit in a sturdy, armless chair with your feet flat on the floor, shoulder-width apart.

2. Place the center of the resistance band under both feet. Hold each end of the band with palms facing inward. Keep elbows at your sides. Breathe in slowly.

3. Keep wrists straight and slowly breathe out as you bend your elbows and bring your hands toward your shoulders.

4. Hold the position for 1 second.

5. Breathe in as you slowly lower your arms.

6. Repeat 10-15 times.

7. Rest; then repeat 10-15 more times.

**TIP**
As you progress, use a heavier strength band.
Seated Row with Resistance Band

1. Sit in a sturdy, armless chair with your feet flat on the floor, shoulder-width apart.
2. Place the center of the resistance band under both feet. Hold each end of the band with palms facing inward.
3. Relax your shoulders and extend your arms beside your legs. Breathe in slowly.
4. Breathe out slowly and pull both elbows back until your hands are at your hips.
5. Hold position for 1 second.
6. Breathe in as you slowly return your hands to the starting position.
7. Repeat 10-15 times.
8. Rest; then repeat 10-15 more times.

**TIP**
As you progress, use a heavier strength band.

This exercise to strengthen upper back, shoulder, and neck muscles should make everyday activities such as raking and vacuuming easier. (See Working with a Resistance Band on page 44.)
CHAPTER 4: SAMPLE EXERCISES

1. Face a wall, standing a little farther than arm’s length away, feet shoulder-width apart.

2. Lean your body forward and put your palms flat against the wall at shoulder height and shoulder-width apart.

3. Slowly breathe in as you bend your elbows and lower your upper body toward the wall in a slow, controlled motion. Keep your feet flat on the floor.

4. Hold the position for 1 second.

5. Breathe out and slowly push yourself back until your arms are straight.

6. Repeat 10-15 times.

7. Rest; then repeat 10-15 more times.

These push-ups will strengthen your arms, shoulders, and chest. Try this exercise during a TV commercial break.

Wall Push-Up
Elbow Extension

1. You can do this exercise while standing or sitting in a sturdy, armless chair.
2. Keep your feet flat on the floor, shoulder-width apart.
3. Hold weight in one hand with palm facing inward. Raise that arm toward ceiling.
4. Support this arm below elbow with other hand. Breathe in slowly.
5. Slowly bend raised arm at elbow and bring weight toward shoulder.
6. Hold position for 1 second.
7. Breathe out and slowly straighten your arm over your head. Be careful not to lock your elbow.
8. Repeat 10-15 times.
9. Repeat 10-15 times with other arm.
10. Repeat 10-15 more times with each arm.

TIP If it’s difficult for you to hold hand weights, try using wrist weights.

This exercise will strengthen your upper arms. If your shoulders aren’t flexible enough to do this exercise, try the Chair Dip on page 55.
Chair Dip

1. Sit in a sturdy chair with armrests with your feet flat on the floor, shoulder-width apart.
2. Lean slightly forward; keep your back and shoulders straight.
3. Grasp arms of chair with your hands next to you. Breathe in slowly.
4. Breathe out and use your arms to push your body slowly off the chair.
5. Hold position for 1 second.
6. Breathe in as you slowly lower yourself back down.
7. Repeat 10-15 times.
8. Rest; then repeat 10-15 more times.

This pushing motion will strengthen your arm muscles even if you are not able to lift yourself up off the chair.
Back Leg Raise

1. Stand behind a sturdy chair, holding on for balance. Breathe in slowly.
2. Breathe out and slowly lift one leg straight back without bending your knee or pointing your toes. Try not to lean forward. The leg you are standing on should be slightly bent.
3. Hold position for 1 second.
4. Breathe in as you slowly lower your leg.
5. Repeat 10-15 times.
6. Repeat 10-15 times with other leg.
7. Repeat 10-15 more times with each leg.

TIP
As you progress, you may want to add ankle weights.

This exercise strengthens your buttocks and lower back. For an added challenge, you can modify the exercise to improve your balance. (See Progressing to Improve Balance on page 68.)
This exercise strengthens hips, thighs, and buttocks. For an added challenge, you can modify the exercise to improve your balance. (See Progressing to Improve Balance on page 68.)

1. Stand behind a sturdy chair with feet slightly apart, holding on for balance. Breathe in slowly.

2. Breathe out and slowly lift one leg out to the side. Keep your back straight and your toes facing forward. The leg you are standing on should be slightly bent.

3. Hold position for 1 second.

4. Breathe in as you slowly lower your leg.

5. Repeat 10-15 times.

6. Repeat 10-15 times with other leg.

7. Repeat 10-15 more times with each leg.

TIP

As you progress, you may want to add ankle weights.
Knee Curl

1. Stand behind a sturdy chair, holding on for balance. Lift one leg straight back without bending your knee or pointing your toes. Breathe in slowly.

2. Breathe out as you slowly bring your heel up toward your buttocks as far as possible. Bend only from your knee, and keep your hips still. The leg you are standing on should be slightly bent.

3. Hold position for 1 second.

4. Breathe in as you slowly lower your foot to the floor.

5. Repeat 10-15 times.

6. Repeat 10-15 times with other leg.

7. Repeat 10-15 more times with each leg.

As you progress, you may want to add ankle weights.

Walking and climbing stairs are easier when you do both the Knee Curl and Leg Straightening exercises. For an added challenge, you can modify the exercise to improve your balance. (See Progressing to Improve Balance on page 68.)
This exercise strengthens your thighs and may reduce symptoms of arthritis of the knee.

1. Sit in a sturdy chair with your back supported by the chair. Only the balls of your feet and your toes should rest on the floor. Put a rolled bath towel at the edge of the chair under thighs for support. Breathe in slowly.

2. Breathe out and slowly extend one leg in front of you as straight as possible, but don’t lock your knee.

3. Flex foot to point toes toward the ceiling. Hold position for 1 second.

4. Breathe in as you slowly lower leg back down.

5. Repeat 10-15 times.

6. Repeat 10-15 times with other leg.

7. Repeat 10-15 more times with each leg.

TIP: As you progress, you may want to add ankle weights.
Chair Stand

60 EXERCISE & PHYSICAL ACTIVITY

This exercise, which strengthens your abdomen and thighs, will make it easier to get in and out of the car. If you have knee or back problems, talk with your doctor before trying this exercise.

1. Sit toward the front of a sturdy, armless chair with knees bent and feet flat on floor, shoulder-width apart.

2. Lean back with your hands crossed over your chest. Keep your back and shoulders straight throughout exercise. Breathe in slowly.

3. Breathe out and bring your upper body forward until sitting upright.

4. Extend your arms so they are parallel to the floor and slowly stand up.

5. Breathe in as you slowly sit down.

6. Repeat 10-15 times.

7. Rest; then repeat 10-15 more times.
People with back problems should start the exercise from the sitting upright position.
**Toe Stand**

1. Stand behind a sturdy chair, feet shoulder-width apart, holding on for balance. Breathe in slowly.
2. Breathe out and slowly stand on tiptoes, as high as possible.
3. Hold position for 1 second.
4. Breathe in as you slowly lower heels to the floor.
5. Repeat 10-15 times.
6. Rest; then repeat 10-15 more times.

**TIP**

As you progress, try doing the exercise standing on one leg at a time for a total of 10-15 times on each leg.

This exercise will help make walking easier by strengthening your calves and ankles. For an added challenge, you can modify the exercise to improve your balance. (See *Progressing to Improve Balance* on page 68.)
Lian, age 68, has found that regular tai chi classes have improved her balance and flexibility:

“Early every morning, I join a group of my neighbors, and we practice tai chi for about an hour. We start out with a gentle warm-up and breathing exercises. Then our teacher shows us how to do certain poses and leads us step by step through the slow, flowing movements. We end with cooling down exercises. This exercise routine has boosted my confidence and reduced my fear of falling. It also keeps my arthritis under control.”
How to Improve Your Balance

Each year, more than 1.6 million older Americans go to the emergency room because of fall-related injuries. A simple fall can cause a serious fracture of the arm, hand, ankle, or hip. Balance exercises can help you prevent falls and avoid the disability that may result from falling.

How Much, How Often

You can do the balance exercises in this section as often as you like. They overlap with the lower-body strength exercises, which also can improve your balance. Do the strength exercises 2 or more days per week, but not on any 2 days in a row.

Safety

- Have a sturdy chair or a person nearby to hold on to if you feel unsteady.
- Talk with your doctor if you are unsure about doing a particular exercise.

Progressing

These exercises can improve your balance even more if you modify them as you progress. Start by holding on to a sturdy chair for support. To challenge yourself, try holding on to the chair with only one hand; then with time, you can try holding on with only one finger, then no hands. If you are steady on your feet, try doing the exercise with your eyes closed. (See Progressing to Improve Balance on page 68.) You can use the Strength and Balance Daily Record on page 106 to keep track of your balance exercises.

Anytime, Anywhere Balance Exercises

You can do exercises to improve your balance almost anytime, anywhere, and as often as you like, as long as you have something sturdy nearby to hold on to if you become unsteady. In the beginning, using a chair or the wall for support will help you work on your balance safely.
You can do this exercise while waiting for the bus or standing in line at the grocery. For an added challenge, you can modify the exercise to improve your balance. (See Progressing to Improve Balance on page 68.)

Stand on One Foot

1. Stand on one foot behind a sturdy chair, holding on for balance.
2. Hold position for up to 10 seconds.
3. Repeat 10-15 times.
4. Repeat 10-15 times with other leg.
5. Repeat 10-15 more times with each leg.
Heel-to-Toe Walk

1. Position the heel of one foot just in front of the toes of the other foot. Your heel and toes should touch or almost touch.

2. Choose a spot ahead of you and focus on it to keep you steady as you walk.

3. Take a step. Put your heel just in front of the toes of your other foot.

4. Repeat for 20 steps.

If you are unsteady on your feet, try doing this exercise near a wall so you can steady yourself if you need to.

Having good balance is important for many everyday activities, such as going up and down stairs.
Sample Exercise: Balance Walk

Good balance helps you walk safely and avoid tripping and falling over objects in your way.

1. Raise arms to sides, shoulder height.
2. Choose a spot ahead of you and focus on it to keep you steady as you walk.
3. Walk in a straight line with one foot in front of the other.
4. As you walk, lift your back leg. Pause for 1 second before stepping forward.
5. Repeat for 20 steps, alternating legs.

**TIP**
As you progress, try looking from side to side as you walk, but skip this step if you have inner ear problems.
Progressing to Improve Balance

The exercises in this guide — especially those to strengthen your legs and ankles — can help improve your balance. As you progress, try adding the challenges shown below to help even more. For example, start by holding on to a sturdy chair with both hands for support. To challenge yourself further, try holding on to the chair with only one hand. As you feel steady, try using just one finger to balance you. Then, try balancing without holding on. When you are steady on your feet, try doing the exercises with your eyes closed. You can use these modifications with the following exercises:

- Back Leg Raise (page 56)
- Side Leg Raise (page 57)
- Knee Curl (page 58)
- Toe Stand (page 62)
Grace, age 66, has found that stretching exercises have become an important addition to her new exercise routine:

“I grew up on a farm and continued farming after I married. So, I was used to hard work and plenty of physical activity. When my son and his family took over running the farm, I needed to start a new exercise routine. Now, I begin most mornings with a walk and stretches. Good thing, too! The stretching keeps me limber, and the walking gives me plenty of stamina to keep up with my seven grandchildren. Exercise helps me stay active in their lives, and that makes it all worthwhile.”
How to Improve Your Flexibility

Stretching, or flexibility, exercises are an important part of your physical activity program. They give you more freedom of movement for your physical activities and for everyday activities such as getting dressed and reaching objects on a shelf. Stretching exercises can improve your flexibility but will not improve your endurance or strength.

How Much, How Often

- Do each stretching exercise 3 to 5 times at each session.
- Slowly stretch into the desired position, as far as possible without pain, and hold the stretch for 10 to 30 seconds. Relax, breathe, then repeat, trying to stretch farther.

Safety

- Talk with your doctor if you are unsure about a particular exercise. For example, if you’ve had hip or back surgery, talk with your doctor before doing lower-body exercises.
- Always warm up before stretching exercises. Stretch after endurance or strength exercises. If you are doing only stretching exercises, warm up with a few minutes of easy walking first. Stretching your muscles before they are warmed up may result in injury.

- Always remember to breathe normally while holding a stretch.
- Stretching may feel slightly uncomfortable; for example, a mild pulling feeling is normal.
- You are stretching too far if you feel sharp or stabbing pain, or joint pain — while doing the stretch or even the next day. Reduce the stretch so that it doesn’t hurt.
- Never “bounce” into a stretch. Make slow, steady movements instead. Jerking into position can cause muscles to tighten, possibly causing injury.
- Avoid “locking” your joints. Straighten your arms and legs when you stretch them, but don’t hold them tightly in a straight position. Your joints should always be slightly bent while stretching.

Progressing

You can progress in your stretching exercises. For example, as you become more flexible, try reaching farther, but not so far that it hurts.

You can use the Flexibility Daily Record on page 107 to keep track of your flexibility exercises.
This easy stretch can help relieve tension in your neck. Try to stretch after strength training and during any activity that makes you feel stiff, such as sitting at a desk.

1. You can do this stretch while standing or sitting in a sturdy chair.
2. Keep your feet flat on the floor, shoulder-width apart.
3. Slowly turn your head to the right until you feel a slight stretch. Be careful not to tip or tilt your head forward or backward, but hold it in a comfortable position.
4. Hold the position for 10-30 seconds.
5. Turn your head to the left and hold the position for 10-30 seconds.
6. Repeat at least 3-5 times.
Shoulder

1. Stand back against a wall, feet shoulder-width apart and arms at shoulder height.
2. Bend your elbows so your fingertips point toward the ceiling and touch the wall behind you. Stop when you feel a stretch or slight discomfort, and stop immediately if you feel sharp pain.
3. Hold position for 10-30 seconds.
4. Let your arms slowly roll forward, remaining bent at the elbows, to point toward the floor and touch the wall again, if possible. Stop when you feel a stretch or slight discomfort.
5. Hold position for 10-30 seconds.
6. Alternate pointing above head, then toward hips.
7. Repeat at least 3-5 times.

This exercise to stretch your shoulder muscles will help improve your posture.
This exercise to increase flexibility in your shoulders and upper arms will help make it easier to reach for your seatbelt. **If you have shoulder problems, talk with your doctor before trying this stretch.**

1. **Stand with feet shoulder-width apart.**
2. **Hold one end of a towel in your right hand.**
3. **Raise and bend your right arm to drape the towel down your back. Keep your right arm in this position and continue holding on to the towel.**
4. **Reach behind your lower back and grasp the towel with your left hand.**
5. **To stretch your right shoulder, pull the towel down with your left hand. Stop when you feel a stretch or slight discomfort in your right shoulder.**
6. **Repeat at least 3-5 times.**
7. **Reverse positions, and repeat at least 3-5 times.**
Upper Body

This exercise increases the flexibility of your arms, chest, and shoulders, and will help you reach items on the upper shelves of your closet or kitchen cabinet.

1. Stand facing a wall slightly farther than arm's length from the wall, feet shoulder-width apart.
2. Lean your body forward and put your palms flat against the wall at shoulder height and shoulder-width apart.
3. Keeping your back straight, slowly walk your hands up the wall until your arms are above your head.
4. Hold your arms overhead for about 10-30 seconds.
5. Slowly walk your hands back down.
6. Repeat at least 3-5 times.

TIP As you progress, the goal is to reach higher.
This exercise, which stretches the chest muscles, is also good for your posture.

</tbody>
</table>
Back 1

1. Sit securely toward the front of a sturdy, armless chair with your feet flat on the floor, shoulder-width apart.

2. Slowly bend forward from your hips. Keep your back and neck straight.

3. Slightly relax your neck and lower your chin. Slowly bend farther forward and slide your hands down your legs toward your shins. Stop when you feel a stretch or slight discomfort.

5. Straighten up slowly all the way to the starting position.

6. Repeat at least 3-5 times.

TIP As you progress, bend as far forward as you can and eventually touch your heels.

This exercise is for your back muscles. If you’ve had hip or back surgery, talk with your doctor before trying this stretch.
This exercise will help you do activities that require you to twist or turn to look behind you, such as backing out of a parking space or swinging a golf club. If you’ve had hip or back surgery, talk with your doctor before trying this stretch.

1. Sit up toward the front of a sturdy chair with armrests. Stay as straight as possible. Keep your feet flat on the floor, shoulder-width apart.

2. Slowly twist to the left from your waist without moving your hips. Turn your head to the left. Lift your left hand and hold on to the left arm of the chair. Place your right hand on the outside of your left thigh. Twist farther, if possible.

3. Hold the position for 10-30 seconds.

4. Slowly return to face forward.

5. Repeat on the right side.

6. Repeat at least 3-5 more times.

TIP: As you progress, try lifting your left arm and resting it comfortably on the back of the chair. Hold on to the left armrest with your right arm. Repeat on right side.
Upper Back

This exercise is good for your shoulders and upper-back muscles.

1. Sit in a sturdy, armless chair with your feet flat on the floor, shoulder-width apart.
2. Hold arms in front of you at shoulder height with palms facing outward.
3. Relax your shoulders, keep your upper body still, and reach forward with your hands. Stop when you feel a stretch or slight discomfort.
5. Sit back up.
6. Repeat at least 3-5 times.

As you progress, cross your arms and interlace fingers.
This exercise stretches your ankle muscles. You can stretch both ankles at once or one at a time.

1. Sit securely toward the edge of a sturdy, armless chair.
2. Stretch your legs out in front of you.
3. With your heels on the floor, bend your ankles to point toes toward you.
4. Hold the position for 10-30 seconds.
5. Bend ankles to point toes away from you and hold for 10-30 seconds.
6. Repeat at least 3-5 times.
About Floor Exercises

To Get Down on the Floor:

1. Stand facing the seat of a sturdy chair.
2. Put your hands on the seat, and lower yourself down on one knee.
3. Bring the other knee down.
4. Put your left hand on the floor. Leaning on your hand, slowly bring your left hip to the floor. Put your right hand on the floor next to your left hand to steady yourself, if needed.
5. You should now be sitting with your weight on your left hip.
6. Straighten your legs.
7. Bend your left elbow until your weight is resting on it. Using your right hand as needed for support, straighten your left arm. You should now be lying on your left side.
8. Roll onto your back.

TIP You don’t have to use your left side. You can use your right side, if you prefer.
If you have trouble getting down on or up from the floor by yourself, try using the buddy system. Find someone who will be able to help you. Knowing how to use a chair to get down on the floor and get back up again also may be helpful. If you've had hip or back surgery, talk with your doctor before using the following method.

To Get Up from the Floor:

1. Roll onto your left side.
2. Place your right hand on the floor at about the level of your ribs and use it to push your shoulders off the floor. Use your left hand to help lift you up, as needed.
3. You should now be sitting with your weight on your left hip.
4. Roll forward, onto your knees, leaning on your hands for support.
5. Reach up and lean your hands on the seat of a sturdy chair.
6. Lift one of your knees so that one leg is bent, foot flat on the floor.
7. Leaning your hands on the seat of the chair for support, rise from this position.

TIP You don’t have to use your left side. You can use your right side, if you prefer.
**Back of Leg Floor**

1. Lie on your back with left knee bent and left foot flat on the floor.
2. Raise right leg, keeping knee slightly bent.
3. Reach up and grasp right leg with both hands. Keep head and shoulders flat on the floor.
4. Gently pull right leg toward your body until you feel a stretch in the back of your leg.
5. Hold position for 10-30 seconds.
6. Repeat at least 3-5 times.
7. Repeat at least 3-5 times with left leg.

This exercise stretches the muscles in the back of your legs. If you've had hip or back surgery, talk with your doctor before trying this stretch. (See About Floor Exercises on page 80.)
Here's another exercise that stretches the muscles in the back of your legs. If you've had hip or back surgery, talk with your doctor before trying this stretch.

1. Sit sideways on a bench or other hard surface, such as two chairs placed together.
2. Keeping back straight, stretch one leg out on the bench, toes pointing up.
3. Keep other foot flat on the floor.
4. If you feel a stretch at this point, hold position for 10-30 seconds.
5. If you don't feel a stretch, lean forward from hips (not waist) until you feel stretching in the leg on the bench.
7. Repeat at least 3-5 times.
8. Repeat at least 3-5 times with your other leg.
**Thigh Floor**

1. Lie on your side with legs straight and knees together.
2. Rest your head on your arm.
3. Bend top knee and reach back and grab the top of your foot. If you can’t reach your foot, loop a resistance band, belt, or towel over your foot and hold both ends.
4. Gently pull your leg until you feel a stretch in your thigh.
5. Hold position for 10-30 seconds.
6. Repeat at least 3-5 times.
7. Repeat at least 3-5 times with your other leg.

This exercise stretches your thigh muscles. If you’ve had hip or back surgery, talk with your doctor before trying this stretch. If you have trouble getting down on the floor or back up again, try the Thigh Standing stretch. (See About Floor Exercises on page 80.)
Here’s another exercise that stretches your thigh muscles. If you’ve had hip or back surgery, talk with your doctor before trying this stretch.

1. Stand behind a sturdy chair with your feet shoulder-width apart and your knees straight, but not locked.
2. Hold on to the chair for balance with your right hand.
3. Bend your left leg back and grab your foot in your left hand. Keep your knee pointed to the floor. If you can’t grab your ankle, loop a resistance band, belt, or towel around your foot and hold both ends.
4. Gently pull your leg until you feel a stretch in your thigh.
5. Hold position for 10-30 seconds.
6. Repeat at least 3-5 times.
7. Repeat at least 3-5 times with your right leg.
This exercise will stretch your hip and inner thigh muscles. If you've had hip or back surgery, talk with your doctor before trying this stretch. (See About Floor Exercises on page 80.)

1. Lie on your back with your legs together, knees bent, and feet flat on the floor. Try to keep both shoulders on the floor throughout the stretch.
2. Slowly lower one knee as far as you comfortably can. Keep your feet close together and try not to move the other leg.
3. Hold position for 10-30 seconds.
4. Bring knee back up slowly.
5. Repeat at least 3-5 times.
6. Repeat at least 3-5 times with your other leg.
This exercise stretches the muscles of your lower back. If you’ve had hip or back surgery, talk with your doctor before trying this stretch. (See About Floor Exercises on page 80.)

1. Lie on your back with your legs together, knees bent, and feet flat on the floor. Try to keep both arms and shoulders flat on the floor throughout the stretch.
2. Keeping knees bent and together, slowly lower both legs to one side as far as you comfortably can.
3. Hold position for 10-30 seconds.
4. Bring legs back up slowly and repeat toward other side.
5. Continue alternating sides for at least 3-5 times on each side.
1. Stand facing a wall slightly farther than arm's length from the wall, feet shoulder-width apart.

2. Put your palms flat against the wall at shoulder height and shoulder-width apart.

3. Step forward with right leg and bend right knee. Keeping both feet flat on the floor, bend left knee slightly until you feel a stretch in your left calf muscle. It shouldn’t feel uncomfortable. If you don’t feel a stretch, bend your right knee until you do.

4. Hold position for 10-30 seconds, and then return to starting position.

5. Repeat with left leg.

6. Continue alternating legs for at least 3-5 times on each leg.

Because many people have tight calf muscles, it’s important to stretch them.
This is a good over-all stretch that’s fun to do with a partner. It stretches your shoulders, arms, back, and legs. **If you’ve had hip or back surgery, talk with your doctor before trying this stretch.** (See Working with a Resistance Band on page 44 and About Floor Exercises on page 80.)

**Buddy Stretch**

1. Sit on the floor facing your buddy and place your feet against your partner’s feet.

2. Both of you should grab one end of a resistance band or towel. Depending on each person’s flexibility, you may need to loop two bands or towels together.

3. Slowly pull the band or towel so that your buddy bends forward and you lean backward.

5. Slowly return to starting position.

6. Now it’s your buddy’s turn to pull the band or towel so that you bend forward and your buddy leans backward. Hold for 10-30 seconds, and then return to starting position.

7. Repeat at least 3-5 times.

**TIP**

As you progress, try holding the band so that your hands are closer to your buddy’s, or try using a heavier strength band. Some people may be able to do the stretch by reaching out and holding hands during the stretch.

</table>

*Calories Burned for 30 Minutes of activity by a 150 lb Person

### Remember!
- During moderate activity, you should be able to talk but not sing. However, during vigorous activity, you should be able to say only a few words without pausing to catch your breath.
- The calories that you burn will depend on how hard you work, your level of physical fitness, and your weight.
- Pick an activity that you enjoy, and invite friends and family to join you – you will motivate each other.
- Start slow, and then build up to increase your activity by doing it more often or for a longer period of time!

In addition to aerobic, calorie-burning exercises, strengthening and flexibility exercises are recommended twice each week. Here are some ideas:

#### Strengthening
- Heavy gardening (digging, shoveling)
- Lifting weights (use common items like canned goods or)
- Push-ups on the floor or against the wall
- Sit-ups
- Chair exercises
- Leg lifts

#### Flexibility
- Yoga
- Pilates
- Stretching

#### Quick Tips to Fit More Activity into Your Daily Life
- Clean the house or wash the car by hand
- Walk, skate or cycle more and drive less
- Do stretches, exercises or pedal a stationary bike while watching television
- Mow the lawn with a push mower
- Replace a coffee break with a 10-minute walk
- Get off the bus one stop early and walk the rest of the way

Activity Log

For a couple of weekdays and a weekend, write down how much time you are physically active (for example, walking, gardening, playing a sport, dancing, lifting weights). The goal is to find ways to increase your activity.
### Goal-Setting Worksheet

Your success depends on setting goals that really matter to you. Write down your goals, put them where you can see them, and renew them regularly.

#### Short-term Goals

Write down at least two of your own personal short-term goals. What will you do over the next week or two that will help you make physical activity a regular part of your life?

1.  
2.  
3.  

#### Long-term Goals

Write down at least two long-term goals. Focus on where you want to be in 6 months, a year, or 2 years from now. Remember, setting goals will help you make physical activity part of your everyday life, monitor your progress, and celebrate your success.

1.  
2.  
3.
Weekly Exercise and Physical Activity Plan

Use this form to make your own exercise and physical activity plan — one you think you really can manage. Update your plan as you progress. Aim for moderate-intensity endurance activities on most or all days of the week. **Try to do strength exercises for all of your major muscle groups on 2 or more days a week, but don’t exercise the same muscle group 2 days in a row.** For example, do upper-body strength exercises on Monday, Wednesday, and Friday and lower-body strength exercises on Tuesday, Thursday, and Saturday. Or, you can do strength exercises of all of your muscle groups every other day. Don’t forget to include balance and flexibility exercises.

Your Health Matters: Fitness for Life
How to Get Started and Stay Active

What do you think…
Why do people not exercise?

Myth #1 "Exercise takes too much time."
Physical activity does take time, but there are ways to make it more manageable:
- Schedule activity time on your calendar like other important appointments.
- Start with 10-minute periods throughout each day.
- Plan activity for early in the morning before the rest of the day’s activities.
- Combine activity with something already part of your daily routine.

Myth #2 "Exercise makes you tired."
False!
- Exercise gives you energy.
- Exercise helps you focus and manage stress.
- Exercise helps you sleep better.

Myth #3 "Older people need less exercise."
False!
- Staying active is important throughout life.
- Regular physical activity helps you stay independent for longer.

Myth #4 "You have to be athletic to exercise."
False!
- People of all types, shapes, sizes, and abilities can benefit from exercise.
Getting Started

1) Check with your health care provider.
2) Choose activities you enjoy.
3) Begin slowly and set realistic goals.

“I will take a 10-minute walk, during lunch, 3 days a week.”

Getting Started

4) Record and reward your progress.
5) Get support from family and friends.
6) Plan for problems – indoor activity for bad weather days.

Start with Walking

It’s Easy
SIMPLE, SAFE, NO COST

It Works
BEST EXERCISE FOR HEART HEALTH

It Pays
LESS HEALTH CARE $,
LESS WORK TIME LOSS

Take the first step!

How to start an exercise routine

BUILD UP GRADUALLY

Week 1: 1 time a week
Week 2: 2 times a week
Week 3: 3 times a week
GOAL
5 times a week

Work at the Right Intensity

1) Know your target heart rate
   (see Pulse and Heart Rate handout)
2) Start slowly.
3) Gradually increase to moderate intensity.
4) Build up to a vigorous intensity.
Safety Tips

- Walk on smooth, soft surfaces in safe areas away from traffic.
- Take more time to warm up and cool down.
- Drink water every 15 minutes – even if you’re not thirsty.

Tips for long-term success

- Make the time.
- Dress for success.
- Keep reasonable expectations of yourself.
- Make it fun!
- Celebrate your success!

Reward yourself!

- New tennis shoes!
- Trip to the pool or beach!
- New outfit!

Create a Support Network

Consider engaging your family and friends.

Join an exercise group – make new friends.

Participate in a charity walk/run.

Staying active… in daily life

- Walk whenever you can.
- Drive less.
- Avoid long periods of inactivity.
- Stretch/bend every hour.

Staying active… at home

- Walk before/after meals.
- Exercise while watching TV.
- Mow with a push mower.
- Play with your kids/grandkids.
- Clean the house or wash the car.
- Plant a garden.
Your Health Matters: Fitness for Life
How to Get Started and Stay Active

Staying active...at work
- Take the stairs.
- Walk around during breaks.
- Join an employee sports team.
- Stretch/bend every hour.

Staying active...at play
- Plan active family outings.
- Take dance, martial arts, yoga.
- Walk, run, or swim.
- Join an activity-focused church group.

Let's move!
10-minute Activity Break
1. Together with your family, do a physical activity this weekend for one hour.
2. This week, pump up your workout! Add at least one vigorous-intensity activity to your routine.

Challenges!
3. Which moderate-intensity activities will you try this week?
   - Biking slowly
   - Dancing
   - Walking briskly
   - Water aerobics
4. Ready for more vigor?
   - Aerobic dancing
   - Jumping rope
   - Biking faster/on hills
   - Swimming laps

How to Get Started and Stay Active
Key Point Recap
- Choose activities you enjoy.
- Start slowly and build up to vigorous.
- Get family and friends involved.
- Be active every day – at home, at work, at play.
- Track and celebrate your success!

PowerPoint
Activity: Pulse and Target Heart Rate

<table>
<thead>
<tr>
<th>ACTIVITY POINT</th>
<th>BEATS COUNTED IN 15 SECONDS</th>
<th>MULTIPLIED BY 4</th>
<th>TOTAL</th>
</tr>
</thead>
<tbody>
<tr>
<td>Example: Resting</td>
<td>17</td>
<td>17 x 4</td>
<td>68</td>
</tr>
<tr>
<td>Resting (yours)</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Immediately after exercising</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>50-60 seconds after exercising</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

People who exercise regularly often have very low resting heart rates because their hearts are stronger and pump more blood each time they contract. During exercise, these healthy hearts quickly soar to within target range. Also, the better shape your heart is in, the faster your heart rate will return to normal. To have a healthy heart, it is important to do some kind of physical activity that puts your heart into its target range for at least 60 minutes of moderate activity every day. Do you have a healthy heart?

1. The maximum heart rate is the highest your pulse rate can get. To calculate your maximum heart rate, use this formula:

   \[
   220 - \text{Your Age} = \text{Maximum Heart Rate}
   \]

   Example: a 35-year-old’s maximum heart rate is 185 beats per minute.

2. Now calculate your maximum heart rate and write it below.

<table>
<thead>
<tr>
<th>Your Age</th>
<th>Your Maximum Heart Rate</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

3. Target heart rate is defined as the heart rate range that should be maintained during aerobic exercise for 20 minutes for optimal cardiovascular fitness. Target Heart Rate is also called the Target Heart Rate Zone.

   To exercise safely and receive the maximum cardiovascular benefits when you exercise, you should try to keep your pulse rate within the target heart rate zone. To determine this zone, use your predicted maximum heart rate.

   Target Heart Rate is represented in units called bpm: beats per minute.

   **Target Heart Rate Zone Formula**

   Lower Limit = Maximum Heart Rate x 50% (0.5)
   Upper Limit = Maximum Heart Rate x 85% (0.85)
Example for 35-year-old:
Lower Limit = 185 x 50% = 93 bpm
Upper Limit = 185 x 85% = 157 bpm

4. Calculate your target heart rate zone and fill in the chart below.

<table>
<thead>
<tr>
<th>Your Age</th>
<th>Your Lower Limit</th>
<th>Your Upper Limit</th>
<th>Your Maximum Heart Rate</th>
</tr>
</thead>
<tbody>
<tr>
<td>Example: 35</td>
<td>93 bpm</td>
<td>157 bpm</td>
<td>185</td>
</tr>
</tbody>
</table>

5. After calculating the numbers check to see if they are correct on the chart below:

<table>
<thead>
<tr>
<th>Age (years)</th>
<th>Target Heart Rate for:</th>
<th>Maximum Heart Rate (bpm)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Moderate-Intensity (bpm)</td>
<td>Vigorous-Intensity (bpm)</td>
</tr>
<tr>
<td></td>
<td>(50-70%)</td>
<td>(70-85%)</td>
</tr>
<tr>
<td>20-24</td>
<td>100-140</td>
<td>140-170</td>
</tr>
<tr>
<td>25-29</td>
<td>98-137</td>
<td>137-166</td>
</tr>
<tr>
<td>30-34</td>
<td>95-133</td>
<td>133-162</td>
</tr>
<tr>
<td>35-39</td>
<td>93-130</td>
<td>130-157</td>
</tr>
<tr>
<td>40-44</td>
<td>90-126</td>
<td>126-153</td>
</tr>
<tr>
<td>45-49</td>
<td>88-123</td>
<td>123-149</td>
</tr>
<tr>
<td>50-54</td>
<td>85-119</td>
<td>119-145</td>
</tr>
<tr>
<td>55-59</td>
<td>83-116</td>
<td>116-140</td>
</tr>
<tr>
<td>60-64</td>
<td>80-112</td>
<td>112-136</td>
</tr>
<tr>
<td>65-69</td>
<td>78-109</td>
<td>109-132</td>
</tr>
<tr>
<td>70-74</td>
<td>75-105</td>
<td>105-128</td>
</tr>
<tr>
<td>75-79</td>
<td>73-102</td>
<td>102-123</td>
</tr>
<tr>
<td>80-84</td>
<td>70-98</td>
<td>98-119</td>
</tr>
<tr>
<td>85+</td>
<td>68-95</td>
<td>95-115</td>
</tr>
</tbody>
</table>
Physical activity will add years to your life, and life to your years.
Small steps make big differences.
Conclusion: Maintaining a Healthy Weight for Life

Small steps can help your family get on the road to maintaining a healthy weight. Choose a different tip each week for you and your family to try. See if you can add to the list. Here are a few tips:

Incorporated physical activity into daily life
- When safe, get off the bus one stop early and walk the rest of the way
- Walk instead of driving to the store, or walk your children to school
- If you drive to the store, park at the far end of the parking lot
- Take the stairs instead of the escalator or elevator
- Go for a family walk after dinner each night
- Walk briskly around the soccer or baseball field while the kids play sports
- Go bowling or dancing or dance at home instead of going to the movies
- Take a 10-minute walk during your lunch or coffee break
- Take the TV out of the bedrooms and dining room
- Instead of watching TV, play catch, tag or garden
- If you watch TV, stretch or do exercises while you watch -- have a family competition to see who can do the most push-ups during a commercial break
- Get up to change the TV channel instead of using the remote
- Celebrate special occasions actively: go swimming or take a nature walk

Do 2 hours and 30 minutes of moderate to vigorous activity each week
- Be active at times in the day when you feel most alert and ready to move
- Start slow, then build up to your goals by increasing how long (time) or how often (frequency) you exercise
- Set specific, attainable goals like “walk 10 minutes at lunch 3 days a week”
- Try out a new activity each week to find those you enjoy most and keep your routine interesting
- Do each activity for at least 10 minutes at a time
- Listen to music while you exercise to keep you moving
- Join a yoga, aerobics or dance class near your home and walk to class
- Join an office sports team, and encourage your kids to join school teams

Do strengthening and flexibility exercises twice a week
- Stretch, do sit-ups or lift light weights while you watch TV
- Use cans of vegetables or soup or water bottles as weights at home
- Play “Simon Says” with your kids – try to do the movements with weights and they do it without

Create a support network
- Get your family involved -- you'll encourage each other to keep it up!
- Invite friends or coworkers to exercise with you instead of meeting to eat
- Join an exercise group near your home or work site
- Participate as a team with friends or coworkers for a charity walk or run

Track your progress
- Keep a log -- seeing how far you’ve gone will make you feel good about your success and help you decide where you can make changes to meet your goals
- Create a family activity calendar to plan and schedule active time

Reward yourself
- Choose non-food rewards, such as a new pair of running shoes or a tennis racket
- Take the kids to the pool or take a trip to the lake instead of using TV as a reward
- Treat yourself to a new inexpensive outfit when you achieve a fitness goal

Don't forget to eat healthy, nutritious foods to supply your body with the energy you need to stay active!

Information Source:

Promoting Activity in Your Community

- **Informational**
  - Place motivational signs near elevators encouraging people to take the stairs.
  - Participate in/host Health Fairs.

- **Behavioral & Social**
  - Set up walking groups.
  - Host community events.

- **Environmental & Policy**
  - Implement an evidence-based campaign.
  - Refer to Walkability and Bikeability Checklists in back of this section.

Community-wide changes can help people be more active.

**Examples**
- Free exercise classes
- Free weight-loss challenges
- Motivational signs by elevators and escalators to encourage people to use nearby stairs
- Community events
- Building trails or activity facilities
- Reducing barriers – lower fees; extended hours

Impact of Community Health Worker Interaction

- Weight loss of 5 pounds or more in 1/3 of participants; thousands of pounds lost with Biggest Loser Challenges
- Improved blood glucose levels; less uncontrolled diabetes; better diabetes self management
- Increased weekly physical activity minutes
- Lowered total cholesterol
Community Presentations

Teach Back Activity

Fitness for Life

Key Point Summary

Energy Balance

- Calories In vs. Calories Out
  - IN: food choices - variety, balance, moderation, nutrient density
- OUT: activity - "FITT"
- Keep track to tip the scale

Remember The “FITT” Principle

Frequency
  How often you exercise

Intensity
  Your level of exercise

Time
  How long you exercise

Type
  Aerobic activity or strength training

Fitness Basics

- Choose moderate- or vigorous-intensity activities, or a mix of both.
- Do at least 150 minutes each week of aerobic activity.
- Also do muscle strengthening and flexibility activities at least two days per week.
- Start slowly and strive to double your weekly time and increase intensity for more health benefits.

How to Get Started and Stay Active

- Choose activities you enjoy.
- Start slowly and build up to vigorous-intensity.
- Get family and friends involved.
- Be active every day – at home, at work, at play.
- Track and celebrate your success!
“On a scale of 0-10, how confident do you feel that you could talk about physical activity with the community?

Community Health Workers can help bring about change with health promotion.

Knowledge Questionnaire

Thank you!
Walkability Checklist

How walkable is your community?

Take a walk with a child and decide for yourselves.

Everyone benefits from walking. These benefits include: improved fitness, cleaner air, reduced risks of certain health problems, and a greater sense of community. But walking needs to be safe and easy. Take a walk with your child and use this checklist to decide if your neighborhood is a friendly place to walk. Take heart if you find problems, there are ways you can make things better.

Getting started:

First, you’ll need to pick a place to walk, like the route to school, a friend’s house or just somewhere fun to go. The second step involves the checklist. Read over the checklist before you go, and as you walk, note the locations of things you would like to change. At the end of your walk, give each question a rating. Then add up the numbers to see how you rated your walk overall. After you’ve rated your walk and identified any problem areas, the next step is to figure out what you can do to improve your community’s score. You’ll find both immediate answers and long-term solutions under “Improving Your Community’s Score...” on the third page.
Take a walk and use this checklist to rate your neighborhood’s walkability.

How walkable is your community?

Location of walk

Rating Scale: 1 2 3 4 5 6

awful many some good very good excellent

1. Did you have room to walk?

☐ Yes ☐ Some problems:
- Sidewalks or paths started and stopped
- Sidewalks were broken or cracked
- Sidewalks were blocked with poles, signs, shrubbery, dumpsters, etc.
- No sidewalks, paths, or shoulders
- Too much traffic
- Something else ____________________________

Rating: (circle one) 1 2 3 4 5 6

Locations of problems: ____________________________

2. Was it easy to cross streets?

☐ Yes ☐ Some problems:
- Road was too wide
- Traffic signals made us wait too long or did not give us enough time to cross
- Needed striped crosswalks or traffic signals
- Parked cars blocked our view of traffic
- Trees or plants blocked our view of traffic
- Needed curb ramps or ramps needed repair
- Something else ____________________________

Rating: (circle one) 1 2 3 4 5 6

Locations of problems: ____________________________

3. Did drivers behave well?

☐ Yes ☐ Some problems: Drivers ...
- Backed out of driveways without looking
- Did not yield to people crossing the street
- Turned into people crossing the street
- Drove too fast
- Sped up to make it through traffic lights or drove through traffic lights?
- Something else ____________________________

Rating: (circle one) 1 2 3 4 5 6

Locations of problems: ____________________________

4. Was it easy to follow safety rules?

Could you and your child:

☐ Yes ☐ No Cross at crosswalks or where you could see and be seen by drivers?

☐ Yes ☐ No Stop and look left, right and then left again before crossing streets?

☐ Yes ☐ No Walk on sidewalks or shoulders facing traffic where there were no sidewalks?

☐ Yes ☐ No Cross with the light?

Rating: (circle one) 1 2 3 4 5 6

Locations of problems: ____________________________

5. Was your walk pleasant?

☐ Yes ☐ Some problems:
- Needed more grass, flowers, or trees
- Scary dogs
- Scary people
- Not well lighted
- Dirty, lots of litter or trash
- Dirty air due to automobile exhaust
- Something else ____________________________

Rating: (circle one) 1 2 3 4 5 6

Locations of problems: ____________________________

How does your neighborhood stack up?
Add up your ratings and decide.

1. _______ 26–30 Celebrate! You have a great neighborhood for walking.
2. _______ 21–25 Celebrate a little. Your neighborhood is pretty good.
3. _______ 16–20 Okay, but it needs work.
4. _______ 11–15 It needs lots of work. You deserve better than that.
5. _______ 5–10 It’s a disaster for walking!

Total: _______

Now that you’ve identified the problems, go to the next page to find out how to fix them.
Now that you know the problems, you can find the answers.

Improving your community's score

1. Did you have room to walk?

<table>
<thead>
<tr>

Bikeability Checklist

How bikeable is your community?

Riding a bike is fun!
Bicycling is a great way to get around and to get your daily dose of physical activity. It's good for the environment, and it can save you money. No wonder many communities are encouraging people to ride their bikes more often!

Can you get to where you want to go by bike?
Some communities are more bikeable than others: how does yours rate? Read over the questions in this checklist and then take a ride in your community, perhaps to the local shops, to visit a friend, or even to work. See if you can get where you want to go by bicycle, even if you are just riding around the neighborhood to get some exercise.

At the end of your ride, answer each question and, based on your opinion, circle an overall rating for each question. You can also note any problems you encountered by checking the appropriate box(es). Be sure to make a careful note of any specific locations that need improvement.

Add up the numbers to see how you rated your ride. Then, turn to the pages that show you how to begin to improve those areas where you gave your community a low score. Before you ride, make sure your bike is in good working order, put on a helmet, and be sure you can manage the ride.
Go for a ride and use this checklist to rate your neighborhood's bikeability.

How bikeable is your community?

Location of bike ride (be specific):  

Rating Scale:  

1. Did you have a place to bicycle safely?

   a) On the road, sharing the road with motor vehicles?

      [ ] Yes  [ ] No  

      [ ] Some problems (please note locations):

      □ No space for bicyclists to ride
      □ Bicycle lane or paved shoulder disappeared
      □ Heavy and/or fast-moving traffic
      □ Too many trucks or buses
      □ No space for bicyclists on bridges or in tunnels
      □ Poorly lighted roadways

      Other problems:

      _____________________________________________________________

   b) On an off-road path or trail, where motor vehicles were not allowed?

      [ ] Yes  [ ] No  

      [ ] Some problems:

      □ Path ended abruptly
      □ Path didn’t go where I wanted to go
      □ Path intersected with roads that were difficult to cross
      □ Path was crowded
      □ Path was unsafe because of sharp turns or dangerous downhills
      □ Path was uncomfortable because of too many hills
      □ Path was poorly lighted

      Other problems:

      _____________________________________________________________

Overall “Safe Place To Ride” Rating: (circle one)  

   1 2 3 4 5 6

2. How was the surface that you rode on?

   [ ] Good  [ ] No

   [ ] Some problems, the road or path had:

      □ Potholes
      □ Cracked or broken pavement
      □ Debris (e.g. broken glass, sand, gravel, etc.)
      □ Dangerous drain grates, utility covers, or metal plates
      □ Uneven surface or gaps
      □ Slippery surfaces when wet (e.g. bridge decks, construction plates, road markings)
      □ Bumpy or angled railroad tracks
      □ Rumble strips

   Other problems:

   _____________________________________________________________

 Overall Surface Rating: (circle one)  

   1 2 3 4 5 6

3. How were the intersections you rode through?

   [ ] Good  [ ] No

   [ ] Some problems:

      □ Had to wait too long to cross intersection
      □ Couldn’t see crossing traffic
      □ Signal didn’t give me enough time to cross the road
      □ Signal didn’t change for a bicycle
      □ Unsure where or how to ride through intersection

   Other problems:

   _____________________________________________________________

Overall Intersection Rating: (circle one)  

   1 2 3 4 5 6

Continue the checklist on the next page...
4. Did drivers behave well?

☐ Good  ☐ Some problems, drivers:
☐ Drove too fast
☐ Passed me too close
☐ Did not signal
☐ Harassed me
☐ Cut me off
☐ Ran red lights or stop sign

Other problems:

Overall Driver Rating: (circle one)  1  2  3  4  5  6

5. Was it easy for you to use your bike?

☐ Good  ☐ Some problems:
☐ No maps, signs, or road markings to help me find my way
☐ No safe or secure place to leave my bicycle at my destination
☐ No way to take my bicycle with me on the bus or train
☐ Scary dogs
☐ Hard to find a direct route I liked
☐ Route was too hilly

Other problems:

Overall Intersection Rating: (circle one)  1  2  3  4  5  6

6. What did you do to make your ride safer?

Your behavior contributes to the bikeability of your community. Check all that apply:

☐ Wore a bicycle helmet
☐ Obeyed traffic signal and signs
☐ Rode in a straight line (didn't weave)
☐ Signaled my turns
☐ Rode with (not against) traffic
☐ Used lights, if riding at night
☐ Wore reflective and/or retroreflective materials and bright clothing
☐ Was courteous to other travelers (motorist, skaters, pedestrians, etc.)

7. Tell us a little about yourself.

In good weather months, about how many days a month do you ride your bike?

☐ Never
☐ Occasionally (one or two)
☐ Frequently (5-10)
☐ Most (more than 15)
☐ Every day

Which of these phrases best describes you?

☐ An advanced, confident rider who is comfortable riding in most traffic situations
☐ An intermediate rider who is not really comfortable riding in most traffic situations
☐ A beginner rider who prefers to stick to the bike path or trail

How does your community rate?

Add up your ratings and decide.

(Questions 6 and 7 do not contribute to your community's score)

2. _____  21–25  Your community is pretty good, but there's always room for improvement.
3. _____  16–20  Conditions for riding are okay, but not ideal. Plenty of opportunity for improvements.
4. _____  11–15  Conditions are poor and you deserve better than this! Call the mayor and the newspaper right away.
5. _____  5–10  Oh dear. Consider wearing body armor and Christmas tree lights before venturing out again.

Total:

Did you find something that needs to be changed?

On the next page, you'll find suggestions for improving the bikeability of your community based on the problems you identified. Take a look at both the short- and long-term solutions and commit to seeing at least one of each through to the end. If you don't, then who will?

During your bike ride, how did you feel physically? Could you go as far or as fast as you wanted to? Were you short of breath, tired, or were your muscles sore? The next page also has some suggestions to improve the enjoyment of your ride.

Bicycling, whether for transportation or recreation, is a great way to get 30 minutes of physical activity into your day. Riding, just like any other activity, should be something you enjoy doing. The more you enjoy it, the more likely you'll stick with it. Choose routes that match your skill level and physical activities. If a route is too long or hilly, find a new one. Start slowly and work up to your potential.
Now that you know the problems, you can find the answers.

**Improving your community's score**

### 1. Did you have a place to bicycle safely?

<table>
<thead>
<tr>
<th>What you and your child can do immediately</th>
<th>What you and your community can do with more time</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>a) On the road?</strong></td>
<td></td>
</tr>
<tr>
<td>No space for bicyclists to ride (e.g. no bike lane or shoulder; narrow lanes)</td>
<td>• participate in local planning meetings</td>
</tr>
<tr>
<td>Bicycle lane or paved shoulder disappeared</td>
<td>• encourage your community to adopt a plan to improve conditions, including a network of bike lanes on major roads</td>
</tr>
<tr>
<td>Heavy and/or fast-moving traffic</td>
<td>• ask your public works department to consider “Share the Road” signs at specific locations</td>
</tr>
<tr>
<td>Too many trucks or buses</td>
<td>• ask your state department of transportation to include paved shoulders on all their rural highways</td>
</tr>
<tr>
<td>No space for bicyclists on bridges or in tunnels</td>
<td>• establish or join a local bicycle advocacy group</td>
</tr>
<tr>
<td>Poorly lighted roadways</td>
<td></td>
</tr>
<tr>
<td><strong>b) On an off-road path or trail?</strong></td>
<td></td>
</tr>
<tr>
<td>Path ended abruptly</td>
<td>• ask the trail manager or agency to improve directional and warning signs</td>
</tr>
<tr>
<td>Path didn't go where I wanted to go</td>
<td>• petition your local transportation agency to improve path/roadway crossings</td>
</tr>
<tr>
<td>Path intersected with roads that were difficult to cross</td>
<td>• ask for more trails in your community</td>
</tr>
<tr>
<td>Path was crowded</td>
<td>• establish or join a “Friends of the Trail” advocacy group</td>
</tr>
<tr>
<td>Path was unsafe because of sharp turns or dangerous downhills</td>
<td></td>
</tr>
<tr>
<td>Path was uncomfortable because of too many hills</td>
<td></td>
</tr>
<tr>
<td>Path was poorly lighted</td>
<td></td>
</tr>
</tbody>
</table>

### 2. How was the surface you rode on?

<table>
<thead>
<tr>
<th>What you and your child can do immediately</th>
<th>What you and your community can do with more time</th>
</tr>
</thead>
<tbody>
<tr>
<td>Potholes</td>
<td>• participate in local planning meetings</td>
</tr>
<tr>
<td>Cracked or broken pavement</td>
<td>• encourage your community to adopt a plan to improve conditions, including a network of bike lanes on major roads</td>
</tr>
<tr>
<td>Debris (e.g. broken glass, sand, gravel, etc.)</td>
<td>• ask your public works department to consider “Share the Road” signs at specific locations</td>
</tr>
<tr>
<td>Dangerous drain grates, utility covers, or metal plates</td>
<td>• ask your state department of transportation to include paved shoulders on all their rural highways</td>
</tr>
<tr>
<td>Uneven surface or gaps</td>
<td>• establish or join a local bicycle advocacy group</td>
</tr>
<tr>
<td>Slippery surfaces when wet (e.g. bridge decks, construction plates, road markings)</td>
<td></td>
</tr>
<tr>
<td>Bumpy or angled railroad tracks</td>
<td></td>
</tr>
<tr>
<td>Rumble strips</td>
<td></td>
</tr>
</tbody>
</table>

### 3. How were the intersections you rode through?

<table>
<thead>
<tr>
<th>What you and your child can do immediately</th>
<th>What you and your community can do with more time</th>
</tr>
</thead>
<tbody>
<tr>
<td>Had to wait too long to cross intersection</td>
<td>• ask the public works department to look at the timing of the specific traffic signals</td>
</tr>
<tr>
<td>Couldn’t see crossing traffic</td>
<td>• ask the public works department to install loop-detectors that detect bicyclists</td>
</tr>
<tr>
<td>Signal didn’t give me enough time to cross the road</td>
<td>• suggest improvements to sightlines that include cutting back vegetation; building out the path crossing; and moving parked cars that obstruct your view</td>
</tr>
<tr>
<td>The signal didn’t change for a bicycle</td>
<td>• organize community-wide, on-bike training on how to safely ride through intersections</td>
</tr>
<tr>
<td>Unsure where or how to ride through intersection</td>
<td></td>
</tr>
</tbody>
</table>
4. Did drivers behave well?

<table>
<thead>
<tr>
<th>Drivers:</th>
<th>What you and your child can do immediately</th>
<th>What you and your community can do with more time</th>
</tr>
</thead>
<tbody>
<tr>
<td>Drove too fast</td>
<td>• report unsafe drivers to the police</td>
<td>• ask the police department to enforce speed limits and safe driving</td>
</tr>
<tr>
<td>Passed me too close</td>
<td>• set an example by riding responsibly; obey traffic laws; don’t antagonize drivers</td>
<td>• encourage your department of motor vehicles to include “Share the Road” messages in driver tests and correspondence with drivers</td>
</tr>
<tr>
<td>Did not signal</td>
<td>• always expect the unexpected</td>
<td>• ask city planners and traffic engineers for traffic calming ideas</td>
</tr>
<tr>
<td>Harassed me</td>
<td>• work with your community to raise awareness to share the road</td>
<td>• encourage your community to use cameras to catch speeders and red light runners</td>
</tr>
<tr>
<td>Cut me off</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Ran red lights or stop signs</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

5. Was it easy for you to use your bike?

<table>
<thead>
<tr>
<th>Issues</th>
<th>What you can do immediately</th>
<th>What you can do with more time</th>
</tr>
</thead>
<tbody>
<tr>
<td>No maps, signs, or road markings to help me find my way</td>
<td>• plan your route ahead of time</td>
<td>• ask your community to publish a local bike map</td>
</tr>
<tr>
<td>No safe or secure place to leave my bicycle at my destination</td>
<td>• find somewhere close by to lock your bike; never leave it unlocked</td>
<td>• ask your public works department to install bike parking racks at key destinations; work with them to identify locations</td>
</tr>
<tr>
<td>No way to take my bicycle with me on the bus or train</td>
<td>• report scary dogs to the animal control department</td>
<td>• petition your transit agency to install bike racks on all their buses</td>
</tr>
<tr>
<td>Scary dogs</td>
<td>• learn to use all of your gears!</td>
<td>• plan your local route network to minimize the impact of steep hills</td>
</tr>
<tr>
<td>Hard to find a direct route I liked</td>
<td></td>
<td>• establish or join a bicycle user group (BUG) at your workplace</td>
</tr>
<tr>
<td>Route was too hilly</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

6. What did you do to make your ride safer?

<table>
<thead>
<tr>
<th>Actions</th>
<th>What you can do immediately</th>
<th>What you can do with more time</th>
</tr>
</thead>
<tbody>
<tr>
<td>Wore a bicycle helmet</td>
<td>• go to your local bike shop and buy a helmet; get lights and reflectors if you are expecting to ride at night</td>
<td></td>
</tr>
<tr>
<td>Obeyed traffic signals and signs</td>
<td>• always follow the rules of the road and set a good example</td>
<td>• ask the police to enforce bicycle laws</td>
</tr>
<tr>
<td>Rode in a straight line (didn’t weave)</td>
<td>• take a class to improve your riding skills and knowledge</td>
<td>• encourage your school or youth agencies to teach bicycle safety (on-bike)</td>
</tr>
<tr>
<td>Signaled my turns</td>
<td></td>
<td>• start or join a local bicycle club</td>
</tr>
<tr>
<td>Rode with (not against) traffic</td>
<td></td>
<td>• become a bicycle safety instructor</td>
</tr>
<tr>
<td>Used lights, if riding at night</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Wore reflective materials and bright clothing</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Was courteous to other travelers (motorists, skaters, pedestrians, etc.)</td>
<td></td>
<td></td>
</tr>

# Glossary of Terms: Fitness for Life

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>AEROBIC EXERCISE</strong></td>
<td>Exercise that involves or improves oxygen consumption by the body and usually lasts over an extended period of time. Examples include cycling, jogging, speed walking, etc.</td>
</tr>
<tr>
<td><strong>ANAEROBIC EXERCISE</strong></td>
<td>Anaerobic means “without air” or “without oxygen.” Anaerobic exercise is a short lasting, high intensity activity, where the demand for oxygen from the exercise exceeds the oxygen supply. Examples include heavy weight lifting, sprints, jumping rope, etc.</td>
</tr>
<tr>
<td><strong>BODY COMPOSITION</strong></td>
<td>The amount of fat vs. lean muscle tissue in the human body. This is commonly expressed as a percentage of a person's total weight.</td>
</tr>
<tr>
<td><strong>BODY MASS INDEX (BMI)</strong></td>
<td>A number calculated from a person’s weight and height. BMI provides a reliable indicator of body fatness for most people and is used to screen for weight categories that may lead to health problems.</td>
</tr>
<tr>
<td><strong>BORG RATING OF PERCEIVED EXERTION (BORG SCALE)</strong></td>
<td>A simple method of rating perceived exertion (RPE) on a scale of 1 to 15 and can be used by coaches to gauge an athlete’s level of intensity in training and competition.</td>
</tr>
<tr>
<td><strong>CARDIOVASCULAR</strong></td>
<td>Of, relating to, or involving the heart and the blood vessels.</td>
</tr>
<tr>
<td><strong>CARDIORESPIRATORY ENDURANCE</strong></td>
<td>The ability of the body's circulatory and respiratory systems to supply fuel during sustained physical activity</td>
</tr>
<tr>
<td><strong>EXERCISE</strong></td>
<td>Exercise is physical activity that is structured, planned, and regular. It involves repetitive bodily movement done to improve or maintain one or more of the components of physical fitness—cardiorespiratory endurance (aerobic fitness), muscular strength, muscular endurance, flexibility, and body composition.</td>
</tr>
<tr>
<td><strong>FLEXIBILITY</strong></td>
<td>The range of motion around a joint.</td>
</tr>
<tr>
<td><strong>FREQUENCY</strong></td>
<td>How often one exercises.</td>
</tr>
<tr>
<td><strong>INTENSITY</strong></td>
<td>The level of physical exertion during exercise.</td>
</tr>
<tr>
<td><strong>MAXIMUM HEART RATE</strong></td>
<td>The highest number of times your heart can contract in one minute, or the heart rate that a person could achieve during maximal physical exertion.</td>
</tr>
<tr>
<td><strong>MET</strong></td>
<td>The standard metabolic equivalent, or MET, level. This unit is used to estimate the amount of oxygen used by the body during physical activity.</td>
</tr>
<tr>
<td><strong>MODERATE-INTENSITY PHYSICAL ACTIVITY</strong></td>
<td>Moderate-intensity physical activity refers to a level of effort in which a person should experience: Some increase in breathing or heart rate a &quot;perceived exertion&quot; of 11 to 14 on the Borg scale 3 to 6 metabolic equivalents (METs); or any activity that burns 3.5 to 7 Calories per minute (kcal/min)</td>
</tr>
<tr>
<td><strong>MUSCULAR ENDURANCE</strong></td>
<td>The ability of the muscle to continue to perform without fatigue.</td>
</tr>
<tr>
<td><strong>MUSCULAR STRENGTH</strong></td>
<td>The ability of the muscle to exert force during an activity.</td>
</tr>
<tr>
<td><strong>PHYSICAL ACTIVITY</strong></td>
<td>Bodily movement that expends energy; unstructured activity.</td>
</tr>
<tr>
<td><strong>PHYSICAL FITNESS</strong></td>
<td>A set of attributes that people have or achieve that relates to the ability to perform physical activity. Fitness is influenced by physical activity and exercise and consists of five areas: body composition, muscular strength, muscular endurance, cardio respiratory endurance and flexibility.</td>
</tr>
</tbody>
</table>

| **RESTING HEART RATE** | This is a person's heart rate at rest. The best time to find out your resting heart rate is in the morning, after a good night's sleep, and before you get out of bed. |

| **STRETCHING** | To extend (oneself or one's limbs), to lengthen. Developing a healthy range of flexibility (through stretching) allows an individual to move with greater extent of motion. |

| **TARGET HEART RATE** | A desired range of heart rate reached during aerobic exercise which enables one's heart and lungs to receive the most benefit from a workout. |

| **TIME** | The duration of exercise. |

| **TYPE** | The type of exercise you are performing (aerobic, strength training, etc.). |

| **VIGOROUS-INTENSITY PHYSICAL ACTIVITY** | Vigorous-intensity physical activity may be intense enough to represent a substantial challenge to an individual and refers to a level of effort in which a person should experience*:  
- large increase in breathing or heart rate (conversation is difficult or "broken")  
- a "perceived exertion" of 15-17 or greater on the Borg scale;  
- greater than 6 metabolic equivalents (METs); or  
- any activity that burns more than 7 kcal/ min  |

| **WARM UP** | To prepare for an athletic event (whether a game or a workout session) by exercising, stretching, or practicing for a short time beforehand. |

Calorie Control Council: Healthy eating and physical activity for life

¡Podemos! We Can! Ways to Enhance Children’s Activity and Nutrition
### Estimated Calorie Requirements

(In Kilocalories) for Each Gender and Age Group at Three Levels of Physical Activity

This chart shows how many calories are recommended for both males and females in all age groups. The energy requirements also are broken down into levels of activity from sedentary to active. This should give you a sense of how many calories, ENERGY IN, your family members need.

<table>

</tbody>
</table>

<sup>a</sup> These levels are based on Estimated Energy Requirements (EER) from the Institute of Medicine Dietary Reference Intakes macronutrients report, 2002, calculated by gender, age, and activity level for reference-sized individuals. “Reference size,” as determined by IOM, is based on median height and weight for ages up to age 18 years of age and median height and weight for that height to give a BMI of 21.5 for adult females and 22.5 for adult males.

<sup>b</sup> Sedentary means a lifestyle that includes only the light physical activity associated with typical day-to-day life.

<sup>c</sup> Moderately active means a lifestyle that includes physical activity equivalent to walking about 1.5 to 3 miles per day at 3 to 4 miles per hour, in addition to the light physical activity associated with typical day-to-day life.

<sup>d</sup> Active means a lifestyle that includes physical activity equivalent to walking more than 3 miles per day at 3 to 4 miles per hour, in addition to the light physical activity associated with typical day-to-day life.

<sup>e</sup> The calorie ranges shown are to accommodate needs of different ages within the group. For children and adolescents, more calories are needed at older ages. For adults, fewer calories are needed at older ages.

Source: HHS/USDA Dietary Guidelines for Americans, 2005
The U.S. Department of Health and Human Services recommends the following physical activity guidelines for adults:

- Participate in moderate-intensity cardio physical activity on 3-5 days for a minimum of 150 minutes each week
- Or
- Participate in vigorous-intensity cardio physical activity on 3-5 days for a minimum of 75 minutes each week
- And
- Perform 8-10 strength-training exercises, 8-12 repetitions of each exercise twice each week.

**Understanding the recommendation:**

- Cardio or aerobic activity will help strengthen your heart and lungs and manage weight.
- Moderate-intensity cardio activity means you are working hard enough to raise your heart rate, but are still able to talk while doing the activity. Examples of moderate-intensity activities are: walking, biking, swimming and group aerobics.
- Vigorous-intensity cardio activity means you are breathing hard and fast, and your heart rate has gone up quite a bit. Examples of vigorous-intensity activities are: jogging and swimming laps.
- Strength training helps to strengthen muscles and maintain lean muscle tissue. Examples of strength training activities are: lifting weights, using resistance bands, curl-ups and push-ups.

The activity pyramid is a guide that adults may use to plan for an active lifestyle. Choose activities from all levels of the pyramid and consider these tips:

- Check with your health care provider before you begin a moderate-intensity physical activity program.
- Choose activities that you will enjoy.
- Begin slowly and set a realistic goal – “I will take a 10 minute walk during lunch on 3 days each week.”
- Record and reward your progress.
- Get support from family and friends.
- Plan for problems – have an indoor activity plan for bad weather days.

Adapted from Park Nicollet HealthSource
Finding out what kind and how much physical activity you need

**How do I do it?**
It’s your choice. Pick an activity that’s easy to fit into your life. Do at least 10 minutes of physical activity at a time. Choose aerobic activities that work for you. These make your heart beat faster and can make your heart, lungs, and blood vessels stronger and more fit. Also, do strengthening activities which make your muscles do more work than usual.

**Why should I be physically active?**
Physical activity can make you feel stronger and more alive. It is a fun way to be with your family or friends. It also helps you improve your health.

**How many times a week should I be physically active?**
It is up to you, but it is better to spread your activity throughout the week and to be active at least 3 days a week.

**How do I build up more physical activity?**
Do a little more each time. Once you feel comfortable, do it more often. Then you can trade activities at a moderate level for vigorous ones that take more effort. You can do moderate and vigorous activities in the same week.

---

### How much physical activity do I need to do?

This chart tells you about the activities that are important for you to do. Do both aerobic activities and strengthening activities. Each offers important health benefits. And remember, some physical activity is better than none!

<table>
<thead>
<tr>
<th><strong>Aerobic Activities</strong></th>
<th><strong>Muscle Strengthening Activities</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>If you choose activities at a moderate level, do at least <strong>2 hours and 30 minutes</strong> a week.</td>
<td>Do these at least <strong>2 days</strong> a week.</td>
</tr>
<tr>
<td>Slowly build up the amount of time you do physical activities. The more time you spend, the more health benefits you gain. Aim for twice the amount of activity in the box above.</td>
<td>Include all the major muscle groups such as legs, hips, back, chest, stomach, shoulders, and arms.</td>
</tr>
<tr>
<td>Do at least 10 minutes at a time.</td>
<td>Exercises for each muscle group should be repeated 8 to 12 times per session.</td>
</tr>
<tr>
<td>You can combine moderate and vigorous activities.</td>
<td></td>
</tr>
</tbody>
</table>

If you choose vigorous activities, do at least **1 hour and 15 minutes** a week.
How can I tell an activity at a moderate level from a vigorous one?

Vigorous activities take more effort than moderate ones. Here are just a few moderate and vigorous aerobic physical activities. Do these for **10 minutes or more** at a time.

<table>
<thead>
<tr>
<th>Moderate Activities</th>
<th>Vigorous Activities</th>
</tr>
</thead>
<tbody>

Special thanks
to those who
participated in
the development
of this booklet.
You're juggling reports, deadlines and meetings, and busy 25 hours a day, trying to fit in everything, including time with friends and family. You'd like to exercise to get in shape and improve your health, but don't know how to begin or find the time.

To get you started, the American College of Sports Medicine, Shape Up America!, the American Heart Association and the National Cattlemen's Beef Association have created this guide. Fitting Fitness In Even When You're Pressed for Time will show you how to weave exercise into your busy schedule, and gradually build up to 30 minutes of activity on most days of the week. So, if you're interested in a regular exercise program that won't slow you down, read on…

The Top Reasons To Get Active

Get Started With Everyday Activities

Tips For Workday Workouts

Build Muscle Endurance

Fit In Stretches

Take Your Workout On The Road

Stay Motivated

Healthful Eating On The Run
THE TOP REASONS TO GET ACTIVE

And of course, there are the potential physical benefits.

Regular physical activity can help...

WEIGHT WATCH
- Shed extra pounds and abdominal fat—the fat most closely linked to heart disease—and maintain a healthy weight.

HEART HEALTH
- Reduce risk of heart disease, or improve physical functioning if you have had a heart attack or bypass surgery.

CHOLESTEROL COUNT
- Increase HDL ("good") cholesterol and lower triglycerides.

CANCER CHECK
- Reduce risk of colon cancer.

HANDLE ON HYPERTENSION
- Lower high blood pressure and risk of stroke.

BLOOD SUGAR BALANCE
- Control blood sugar (glucose) levels if you have, or are at risk for, diabetes.

BONE BENEFIT
- Improve bone density, reducing the risk of osteoporosis and fractures as you get older.

"Why is physical activity important to you?"

“I like to exercise because it helps me remember to take care of myself. I also find that exercise is a problem solver. For example, when I swim I’m able to sort through my problems and come out feeling refreshed and more able to cope with daily stresses.”

SALES REPRESENTATIVE
New Orleans, LA

“Physical activity is important to me because when you look good, you feel good. For me, exercise is a win-win situation without any real negatives.”

SECRETARY
Washington, DC

“Physical activity helps me stay healthy and keep my weight down.”

EDITOR
Nashville, TN

Did you know that regular physical activity can improve your mental health and outlook on life? Just take a look.

Regular physical activity can help...

EVERYDAY ENERGY
- Give you the energy to do the things you want to do such as spend quality time with friends and family.

MOOD MONITOR
- Reduce feelings of stress, anxiety and depression.

SOUND SLEEP
- Improve your sleep, giving you the rest you need to enjoy daily activities—on the job and at home.

PEAK PERFORMANCE
- Clear your head so that you can approach work refreshed and able to concentrate.

ENHANCED SELF-ESTEEM
- Boost self-confidence by improving your strength, stamina, flexibility, appearance and sense of control.

“Because I’m so busy during the week, I try to fit exercise into my regular schedule in natural ways. For example, I make it a point to walk to and from the train that I take to work. I enjoy these walks—in the morning, they give me time to think about the day ahead, and in the evening, they help clear my head.”

EDUCATION COORDINATOR
Chicago, IL

“I try to do activities that I enjoy. During the winter, I play racquetball or go swimming indoors. In warmer weather, I play in a tennis tournament and go hiking in the mountains where the scenery is spectacular. I don’t see these activities as exercise—I enjoy them too much—but they do keep me in shape!”

SOCIAL WORKER

And of course, there are the potential physical benefits.
To begin your own exercise program, just put one foot in front of the other and gradually build up to 30 minutes of moderate-intensity activity on most days of the week.

Moderate-intensity activities include walking, dancing, housework and golfing—pretty much any activity that involves moving the large muscles in your arms and legs. Even everyday activities like those on page 6 count, and can add up to real health and fitness benefits.

Use the following chart to include everyday activities in your busy schedule, and chart progress. Choose one activity to fit into your workweek and write it in the chart. Take a few weeks to get accustomed to the activity, then add another. Repeat the process until you have successfully incorporated 150 minutes of activity into your workweek—30 minutes, 5 days a week. The first row is filled in as an example.

Once you get started, you’ll be surprised at the snowball effect—one new activity will lead to the next. Soon, you’ll be amazed by the number of ways you can include physical activity in your day without upsetting your schedule.

*Calculations are based on calorie expenditure for a 70 kg (154 lb) person. Weight loss may vary depending on initial weight and intensity of the activity.
As you begin to add steps to your day, you will see that the key to becoming more active is learning to identify opportunities for physical activity—and taking advantage of them as they arise. Here are some tips:

- Get off public transportation a few stops early and walk the rest of the way to your destination.
- In safe areas, park your car at the back, or on the lowest level of garages and parking lots to increase your walk or climb.
- Use the stairs instead of the elevator. To get started, ride the elevator to a midway point and climb the rest of the way. Add more floors as you build stamina.
- Walk to lunch spots at a distance from your office instead of always frequenting the corner cafe.
- Allow time to walk to meetings. If close by, walking can be faster and cheaper than taking a taxi or bus.

“Knowing how I’ll feel when I finish a workout. I know I need to stay active to manage the stress in my life so that I can be a more productive, energetic person. Nice weather is also a great incentive because there are many fun activities to do outside. And having friends who are physically fit and active motivates me because we plan activities together.”

PROJECT COORDINATOR
Bethesda, MD

“Join a nearby health club and work out during lunch, or before or after work. A well-timed workout can give you a needed second wind.”

- Take advantage of speaker phone, and get up and move around during calls. Standing burns more calories than sitting down.
- Take a water cooler workout. Get up to refill your water cup. (You need at least eight cups of fluid each day to keep hydrated.)
- Enjoy activities with friends and family—go dancing or bowling instead of to the movies.
- Sign up for a community sports team—you’ll meet new people, have fun and get in shape at the same time.
- Treat yourself to an aerobics class or try a low-impact aerobics video at home.
- Don’t drive up to the supermarket—carry your groceries to your parked car, and unload the bags at home.
- If safe, walk within your apartment building using stairs to go between floors. You can walk miles this way, no matter what the weather!
- Lose your remote control. Get up to change channels on your television, or to select a radio station or compact disk.
But why stop at everyday aerobic activities? Short sessions of large muscle exercises can increase your endurance, build calorie-burning muscle tissue, prevent back problems and tone muscles.

The following upper-body exercises can be done in 10 minutes in the privacy of your own office, at home or in a hotel room.

**LATERAL LIFTS**
- Stand with one hand on your waist.
- In your other hand, hold a book, paperweight, or other heavy object. Slowly lift the weighted arm sideways until it reaches shoulder height, pause, then lower. Repeat 10–15 times with each arm.

**BICEPS CURLS**
- Stand with your elbows close to your waist, arms at your side, palms facing forward. Hold a book, paperweight or other heavy object in one hand. Curl the weighted hand toward your chest, pause, then lower. Repeat 10 times with each arm.

**DESK PUSHUPS**
- Stand with your hands on your desk, arms straight, shoulder-width apart. Put your feet together, keeping your back straight, slowly bend your elbows so that your head leans in toward the desk, then straighten. Repeat 10–15 times.

**CHEST PRESSES**
- Put your palms together in front of your face, forearms slightly apart. Pressing palms together, slowly lift your elbows until your elbows are at chin level, pause, then lower. Repeat 10–15 times.

**SEATED CRUNCHES**
- Sit on the edge of a stable chair with feet positioned on another chair, cross arms over chest. Lean back and partially raise trunk toward bent knees. Repeat 5–10 times.

**LEG EXTENSIONS**
- Sit on a chair with your feet on the floor. Flex one foot and slowly straighten the leg, pause, then lower. Repeat 20 times on each side. Use ankle weights, if you like.

**STRAIGHT-LEG LIFTS**
- Sit on a chair with your feet on the floor. Flex one foot, straighten, then lift the entire leg off the chair. Hold for 20 seconds, then lower. Repeat 3 times with each leg.

**WALL SQUATS**
- Stand with your back against a wall. Lower yourself into a seated position, and hold for 30 seconds. Repeat 3 times.

**HAMSTRING CURLS**
- Stand and hold onto a file cabinet, bookshelf or chair for support. Slowly lift your heel toward your buttocks, then lower. Repeat 20 times on each side. Use ankle weights, if you like.

**BUTTOCKS SQUEEZES**
- Tighten your buttocks, hold for a few seconds, and release. Repeat 6–8 times. This exercise also can be done in your car, while sitting in traffic.

**WRITING THE ALPHABET**
- Sit at your desk, lift, then rotate one foot to “write” each letter of the alphabet. Switch feet. This exercise also can be done on a train, plane or bus.

**HEEL LIFTS**
- Sit at your desk. Press down on the toes of one foot as you lift up your heel. Hold for a few seconds, then lower. Repeat 10 times with each foot. This exercise also can be done on a train, plane or bus.
So, now you’re up and about and feeling toned. But, the hours spent at your desk can still take their toll on your body. To reduce neck, shoulder and back tension that comes from sitting in one place for hours on end, try some of these stretches. Most are inconspicuous enough to do anytime, anywhere.

**SIDE-TO-SIDE LOOKS**
- Look straight ahead. Slowly turn your head to one side, hold for 10 seconds, then return to center. Repeat 3 times on each side.

**EAR-TO-SHOULDER STRETCHES**
- Slowly lower each ear to the corresponding shoulder, hold for 10 seconds, then return to the upright position. Repeat 3 times on each side.

**NECK ROLLS**
- Lower your head. Slowly roll your neck toward one shoulder, hold for 10 seconds, then roll to the opposite side. Repeat 3 times.

**SHOULDER SHRUGS**
- Sitting in a chair, slowly lift your shoulders up to your ears by squeezing your shoulder blades together, pause, then lower. Repeat 5–10 times.

**SHOULDER ROLLS**
- Put your hands on your waist. Slowly circle your shoulders forward 10 times. Repeat, circling backward.

**SHOULDER CIRCLES**
- Extend both arms sideways at shoulder height. Rotate arms 10 times in small, forward circles. Repeat, circling backward.

**LOWER-BACK STRETCHES**
- Sit on the edge of a stable chair with your feet on the floor. Slowly bend forward from the waist until your hands touch the floor and you feel a stretch in your lower back. Hold 10–15 seconds, then slowly rise back up. Repeat 3–5 times.
Once you get into the habit of including
everyday aerobic activities, muscle endurance
and stretching in your workweek, regardless of
where you are, you will find yourself seeking
opportunities for exercise—even when you’re
out of town. Here are some tips for taking
your (fitness) show on the road.

- Walk around the airport while waiting for a flight
  instead of heading for the nearest newspaper stand
  or restaurant.
- Walk instead of riding on moving airport walkways.
- Take advantage of hotel facilities. Many hotels have
  on-site fitness rooms, video collections that may include
  fitness tapes, or will bring fitness equipment to your
  room. Others can arrange discounted workouts at
  nearby health clubs.
- If you belong to a health club, ask if it has sister clubs
  that you can visit while on business travel.
- Chart a workout course in your hotel. Walk the
  length of the hotel’s hallways, using the stairs to climb
  from one floor to the next. Note where the fire exits
  are. (Before getting started, check on which floors
  you can exit the stairwell.)
- Explore new cities on foot. For example, go on an early
  morning or between-meeting walk. Consult with hotel
  staff who can help you chart a safe and scenic course.
- Check with the concierge on a safe walk to a
  nearby restaurant.
- Pack light hand and ankle weights, a jump rope or a
  resistant elastic band for quick, hotel room workouts.
- Do a few minutes of stretching exercises before
  going to sleep.

“How do you stay motivated?”

“Just knowing that
staying active will
increase my quality of
life. My wife and I are
expecting our first child,
and I want to be healthy
for a long time so that
I can participate actively
in my child’s life. Also,
being active and fit
is a good feeling. It’s
rewarding to physically
challenge myself—to
set a goal and obtain it.”

INSURANCE CLAIMS
ADJUSTER
Westwood, NJ

“I try to work out even
when I don’t feel like
it, mainly because I
know that after a
good workout I will
feel invigorated. I also
realize the importance
of staying in shape to
keep my weight down
and my heart healthy.”

WALL STREET TRADER
New York, NY

The first step is the hardest in becoming more
active, but after a few weeks, your fitness routine
will become a habit that you’ll look forward to
during the day. However, at times you will need
extra encouragement to keep motivated.

- Start off on the right foot by only choosing activities
  that you actually enjoy.
- Engage in a wide variety of activities to keep
  workouts interesting.
- Work out with a friend, family member or co-worker.
  Encourage each other to walk that extra block even on
  busy mornings.
- Set realistic short- and long-term goals and chart
  progress every step of the way.
- Reward yourself when you meet fitness goals.
  For example, treat yourself to a massage, new pair
  of sneakers or clothes.
- Set aside a particular time to work out during the
day so that physical activity becomes a natural part
of your routine.
- Vary the location in which you work out. Instead of
  walking toward the same park every day, do an about
  face, and check out the scenery in the other direction.
- Cut yourself some slack. If you fall off the fitness
  bandwagon, just climb back on again. The benefits
  will be waiting for you.
The good news is that all foods can be part of a healthful diet. Simply balance the foods you eat and engage in regular physical activity. For example, eat a wide variety of whole grains, fruits, and vegetables, and sometimes…

**BREAD GROUP**
(6–11 servings)

**What's In It For You:** complex carbohydrates, B vitamins, fiber  
**Serving Size:** 1 slice bread; ½ bagel, muffin or bun; ½ cup cooked cereal, pasta, or rice; 1 cup ready-to-eat cereal

**VEGETABLE GROUP**
(3–5 servings)

**What's In It For You:** vitamin A, vitamin C, folate, iron, fiber  
**Serving Size:** 1 cup raw, leafy vegetables; ½ cup other vegetables cooked or raw including potatoes, ¼ cup vegetable juice*

**FRUIT GROUP**
(2–4 servings)

**What's In It For You:** vitamin A, vitamin C, potassium, fiber  
**Serving Size:** 1 medium fruit, ½ cup cut or canned fruit, ¼ cup fruit juice*

**MILK GROUP**
(2–3 servings)

**What's In It For You:** calcium, protein, vitamin A, vitamin D  
**Serving Size:** 1 cup milk or yogurt, ½ cup cottage cheese, 1–2 oz cheese

**MEAT GROUP**
(2–3 servings)

**What's In It For You:** iron, zinc, B vitamins, protein. Meat provides "heme" iron, which is better absorbed by the body than iron from plant foods  
**Serving Size:** 3 oz (equivalent to the size of a deck of cards) cooked and boneless lean red meat, skinless poultry or fish; ½ cup of cooked beans, 1 egg or 2 tablespoons of peanut butter counts as 1 ounce of meat

*Values may not containcampus fiber. Other food group items

Just as your day is a balancing act, so is eating right. But, no matter how busy you are, you can fit good nutrition into your schedule by eating a wide variety of foods from each of the five food groups of the Food Guide Pyramid every day.

</table>
Even when most of your meals are eaten away from home, you can make lowfat choices. For example, restaurant staff are happy to answer questions about menu items and accommodate special requests, whenever possible. Follow these suggestions for choosing meals that won’t slow you down on busy workdays.

Ask your waiter to:

- Clarify how a menu item is prepared.
- Remove extra chips, butter and rolls from the table.
- Suggest a lowfat menu item.
- Find out what’s in the “diet” or “vegetarian” platter—these items are not always low in fat and calories.
- Serve salad dressings, sauces, gravies and whipped toppings on the side.
- Have the chef prepare your food without added oil, butter or margarine.
- Hold the mayonnaise on sandwiches—these will come in handy especially on days you might get stuck in traffic.
- Substitute one food for another. For example, request a baked potato or tossed salad instead of French fries.
- Investigate fresh fruit and vegetable options. Even when vegetables and fruit are not featured on a menu, many restaurants will serve them on request.
- Serve vegetables steamed and plain, without sauce.
- Provide skim or lowfat milk with your coffee instead of cream.
- Wrap extra food to go; refrigerate and enjoy for lunch the next day.

Restaurant Menu Glossary

These preparation methods require little or no butter or oil, and bring out ingredients’ great tastes and flavors.

- au jus
- au vin
- baked
- broiled
- cordon bleu
- dry rub
- fresh
- herbed/herb crusted
- light
- light pan sauce
- loin*
- marinara
- marinated
- poached
- red sauce
- roasted
- round*
- steamed
- stir-fried in broth
- tomato-based
- whole-grain
- yogurt sauces

These preparation methods require added fat, and produce rich dishes.

- au gratin
- baked
- batter-dipped
- béchamel sauce
- bearnaise sauce
- bordelaise sauce
- breaded
- buttery
- cheesy
- creamy
- crispy
- en casserole
- en croûte
- fried
- hollandaise
- in gravy
- in rich
- sautéed
- (en)scalloped
- smokered
- stir fried in oil
- stuffed

*Words with a star require refrigerator or freezer storage.

When it comes to snacking on the go and between meals, put yourself in the driver’s seat by keeping lowfat snacks on-hand in the office and on the road. Your busy schedule does not have to take a bite out of your health! Following are office-friendly, lowfat snacks from each of the five food groups.

**BREAD GROUP**
Instant oatmeal in a single-serving package, pretzels; lowfat cookies such as fig bars, graham crackers and ginger snaps; bite-size, ready-to-eat cereals, lowfat breakfast bars

**VEGETABLE GROUP**
Fresh, cut-up vegetables; for added convenience, purchase pre-cut, packaged vegetables

**FRUIT GROUP**
Fresh fruits that require little preparation or cleanup, single-serving fruit cups, dried fruit

**MILK GROUP**
Lowfat, single-serving puddings; sherbet, ice milk, lowfat fresh or frozen yogurt, reduced-fat cheeses

**MEAT GROUP**
Beef jerky, lowfat deli meats* such as sliced beef, ham or turkey; hard-cooked eggs*

* Those with a star require refrigerator or freezer storage.

Keep lowfat snacks that do not require refrigeration in your…

- **Sight**: for example, make it a habit to bring three fruits to work and keep them on your desk. You’ll have a great-tasting, nutritious snack at arms-reach when you get hungry.
- **Drawer**: these will come in handy especially on days when you have to work late.
- **Briefcase**: you’ll have access to a wholesome snack anytime, anywhere.
- **Glove Compartment**: you never know when you might get stuck in traffic.
**Pedometer Log**

Instructions:
1. Wear the pedometer (step counter) everyday, starting when you get up in the morning until you go to bed at night, except when napping or bathing.
2. Attach the pedometer at the waist directly above the knee on a belt loop, buttonhole or with a safety pin to clothes. Do NOT wear it in a pocket- make sure it is flat and close against your body.
3. At the end of each day, write the total number of daily steps on your chart. Then at the end of the week, calculate your total for the week. Set a goal to increase the number of steps you take the next week!
