

Make evidence-based programs  
fit

Analyze needs  
and set goals

Discover available  
interventions

Adapt for your population  
and setting

Put into practice

Test your progress

**We are recruiting health professionals, community health planners, researchers and students to test IM-Adapt. IM-Adapt is an interactive, online tool for finding, selecting, adapting, and planning implementation and evaluation of evidence-based programs for cancer control (e.g. physical activity, nutrition, cancer screening, and vaccination).**

### Eligibility:

- Have regular access to the internet
- Be willing to engage in an adaptation process of an existing evidence-based intervention of your choice
- Students must be an MPH or doctoral students who want to increase knowledge about how to adapt evidence-based programs

**You also can receive up to \$50 for program materials.**

### What participants will do

**Complete 5 modules in the IM-Adapt tool within 6 weeks**

**Complete surveys at baseline and 6-week follow-up**

**Receive up to \$225 for the surveys and tool use.**

**\$50 additional for those invited for optional interview**

**To sign-up, please send an email to [IMAdapt@uth.tmc.edu](mailto:IMAdapt@uth.tmc.edu)**

**DEADLINE TO ENROLL:  
April 1, 2019**

**This study is sponsored by the National Cancer Institute, grant number R01CA163526**

**Investigators: Drs. Cam Escoffery (Rollins School of Public Health, Emory University) and Patricia Mullen and Maria Fernandez (The University of Texas Health Science Center at Houston School of Public Health).**
