Our Earliest Experiences Shape Our Lives

- All children deserve to be born healthy and raised in nurturing environments, with limited exposure to adversity.
- Nurturing relationships in the earliest years lead to healthier brains and bodies, which influence health and wellbeing over the life course.
- Chronic adversity harms children's neurological, biological, and social development, and can have lifelong consequences.
- Millions of children lack the opportunities to a healthy start they deserve.
- Children of color are most likely to face adversity and least likely to have the opportunities all children deserve.

State Policy Choices Shape Opportunities

- State policy choices can empower parents and support children's healthy development.
- We must care for the caregivers so that they can care for the children.
- Systems of support require a combination of broad based economic and family supports AND targeted interventions.
- Variation in state policy choices leads to a patchwork of supports for families, depending on where they live.

Eight Prenatal-to-3 Policy Goals

Healthy and

Equitable

Births

Families have access to necessary services through expanded eligibility, reduced administrative burden and fewer barriers to services, and identification of needs and connection to services.

Parents have the skills and incentives for employment and the resources they need to balance working and parenting.

Parents have the financial and material resources they need to provide for their families.

Children are born healthy to healthy parents, and pregnancy experiences and birth outcomes are equitable.

Parents are mentally and physically healthy, with particular attention paid to the perinatal period.

Children experience warm, nurturing, stimulating interactions with their parents that promote healthy development.

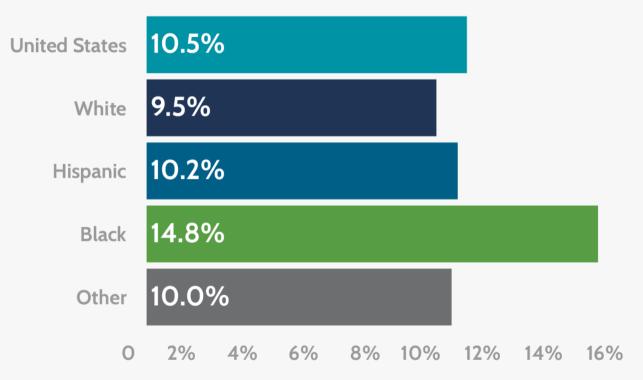

When children are not with their parents, they are in high-quality, nurturing, and safe environments.

Children's emotional, physical, and cognitive development is on track, and delays are identified and addressed early.

State has enacted legislation and will implement the policy after October 1, 2023

Medicaid Expansion

Sufficient Household

Resources

An increase of 0.9 months of Medicaid coverage postpartum (I)
An increase in receiving adequate prenatal care by 3.6 percentage points for Hispanic

• An 8.6 percentage point increase in preconception Medicaid coverage (B)

- women and 2.6 percentage points for non-Hispanic women (EE)
- A 4.7 percentage point decrease in the likelihood of experiencing a catastrophic financial burden (KK)
- A decrease in financial difficulty and health care avoidance because of cost (C, G, H, K, & II)
- A reduction in the poverty rate (Supplemental Poverty Measure) of up to 1.4 percentage points, corresponding to lifting more than 690,000 people out of poverty (CC)

Healthy and Equitable Births

- 0.53 fewer infant deaths per 1,000 live births among Hispanic infants (V)
- 16.3 fewer Black maternal deaths per 100,000 live births (7.0 per 100,000 live births in the overall population) (J)

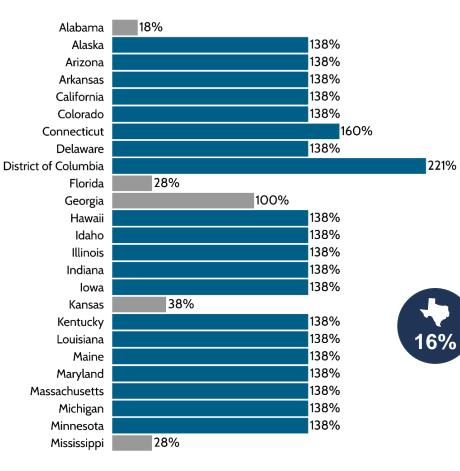

Optimal Child Health and Development

- 422 fewer cases of neglect per 100,000 children under age 6 (U)
- 17.3% reduction in first-time neglect reports for children under age 5 (NN)

Paid Family Leave

How Does Paid Family Leave Impact PN-3 Outcomes?

- An increase in family leave-taking in the first year after birth of 5 weeks for mothers and up to 3 days for fathers (B)
- An increase in family leave-taking of 14.4 percentage points among Black mothers and 6.4 percentage points among Hispanic mothers (no significant increase was found among White mothers) (N)
- An increase in the receipt of postpartum care of 1.5 percentage points for White women and 3.4 percentage points for women of other racial and ethnic groups (Z)
- Up to an 8 percentage point increase in maternal labor force participation in the months surrounding birth (D)
- An increase in time worked by mothers of 7.1 weeks in the second year of a child's life (B)
- A 13% increase in the likelihood of mothers returning to their prebirth employer in the year following birth (B)
- An 18.3 percentage point increase in the probability of mothers working 1 year following birth (B)
- A 2 percentage point reduction in the official poverty measure rate, with even greater effects among single mothers with low levels of education and income (M)
- A 2 percentage point decrease in food insecurity, with even greater effects among households with multiple children (Y)

• A 12% reduction in postneonatal infant mortality (S)

VANDERBILT Peabody College

Paid Family Leave

How Does Paid Family Leave Impact PN-3 Outcomes?

Nurturing

and Responsive

Relationships

• A 5.3 percentage point increase in the number of parents who reported coping well with the day-to-day demands of parenting (C)

@pn3policy #pn3policy

- A 12 percentage point decrease in parental consumption of any alcohol (P)
- An increase in mothers' time spent with children, including reading to their children 2.1 more times per week, having breakfast with children 0.7 more times per week, and going on outings with children 1.8 more times per month (A)
- A 1.3 percentage point increase in exclusive breastfeeding at age 6 months (G)

- A 7.5 percentage point increase in the likelihood of breastfeeding initiation among Black mothers (K)
- Up to a 7 percentage point decrease in the likelihood of infants receiving late vaccinations among families with low incomes (E)
- A decrease in hospital admissions for pediatric abusive head trauma of 2.8 admissions per 100,000 children under age 2 and 5.1 admissions per 100,000 children under age 1 (I)

State Minimum Wage

29

states have fully implemented a minimum wage of \$10.00 or greater.

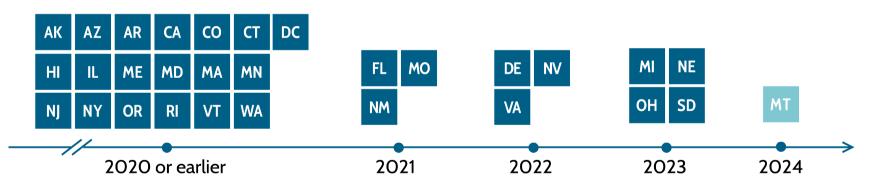

\$7.25 per hour The current state minimum wage in Texas is \$7.25.

State has newly implemented the policy since October 1, 2022

State has enacted legislation and will implement the policy after October 1, 2023

State Minimum Wage Implementation Timeline

30 states have adopted a state minimum wage of \$10.00 per hour or greater

State has fully implemented a state minimum wage of \$10.00 per hour or greater by October 1 of a given year.

State is expected to fully implement a state minimum wage of \$10.00 per hour or greater by October 1 of a given year.

State Minimum Wage

How Does State Minimum Wage Impact PN-3 Outcomes?

- For mothers with no college degree with children under age 6, a 10% increase in the minimum wage reduced poverty by 9.7% (J)
- A 10% increase in the minimum wage led to a 3.5% increase in earnings for families with low incomes and produced a 4.9% reduction in poverty for children under age 18 (B)

@pn3policy #pn3policy

- A \$1.00 minimum wage increase above the federal level led to a 2% decrease in low birthweight and a 4% decrease in postneonatal mortality (E)
- For pregnant women, setting the tipped minimum wage at the full federal minimum wage level led to overall healthier birthweights (O)

- A \$1.00 increase in the minimum wage reduced child neglect reports by 9.6% overall and 10.8% for children ages 0 to 5 (G)
- Children affected by a \$1.00 increase in the minimum wage from birth through age 5 saw an 8.7% higher likelihood of excellent or very good health and missed 15.6% fewer school days due to illness or injury from ages 6 through 12 (I)

No EITC

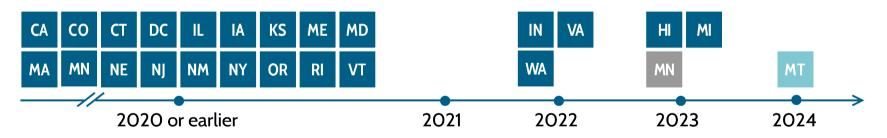

Texas does not have a refundable state EITC and the state does not have an income tax, which is the typical mechanism used to finance and provide administrative structure for a state EITC.

State has newly implemented the policy since October 1, 2022

State has enacted legislation and will implement the policy after October 1, 2023

State Earned Income Tax Credit Implementation Timeline

23 states have adopted a refundable state EITC of at least 10% of the federal credit

State has fully implemented a refundable state EITC of at least 10% of the federal credit by October 1 of a given year.

State is expected to fully implement a refundable state EITC of at least 10% of the federal credit by October 1 of a given year.

State no longer has an EITC of at least 10% of the federal credit for most families with children.

State Earned Income Tax Credit

How Does State Earned Income Tax Credit Impact PN-3 Outcomes?

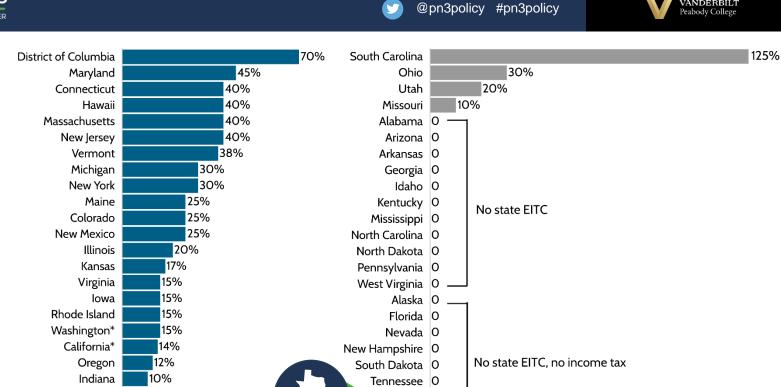

Sufficient Household

Resources

- With each additional \$1,000 in average EITC benefits (federal plus state), unmarried mothers with children under age 3 were 9 percentage points more likely to work (C)
- A state EITC set at 10% of the federal credit increased employment among single mothers by 2.1 percentage points compared to single women with no children (GG)
- Living in a state with an EITC increased the likelihood of mothers' employment (for at least one week per year) by 19% (B)
- State EITCs increased mothers' annual wages by 32% (B)
- A \$1,000 increase in average federal and state EITC benefits led to an increase of \$2,400 in the pre-tax earnings of households with infants and toddlers, and poverty was reduced by 5 percentage points (C)
- A rigorous simulation found that if all states adopted the policy of the most generous EITC state, then child poverty would be reduced by 1.2 percentage points (KK)
- Healthy and Equitable Births
- The state EITC led to increases in birthweight of between 16 and 104 grams, depending on the credit's generosity level (B, CC)
- In states with refundable EITCs of at least 10% of the federal credit, Black mothers with a high school education or less saw greater reductions in low birthweight rates for their infants (1.4 percentage points) compared to White mothers with a high school education or less (0.7 percentage points) (II)

STRATEGY GROUP PRENATAL CARE

states offer an **enhanced Medicaid reimbursement rate** to incentivize group prenatal care

11 states invest **funding** to pilot or scale up group prenatal care in the state

Group Prenatal Care

• A 6.4 percentage point decrease in the likelihood of receiving inadequate prenatal care compared to individual prenatal care participants(C)

@pn3policy #pn3policy

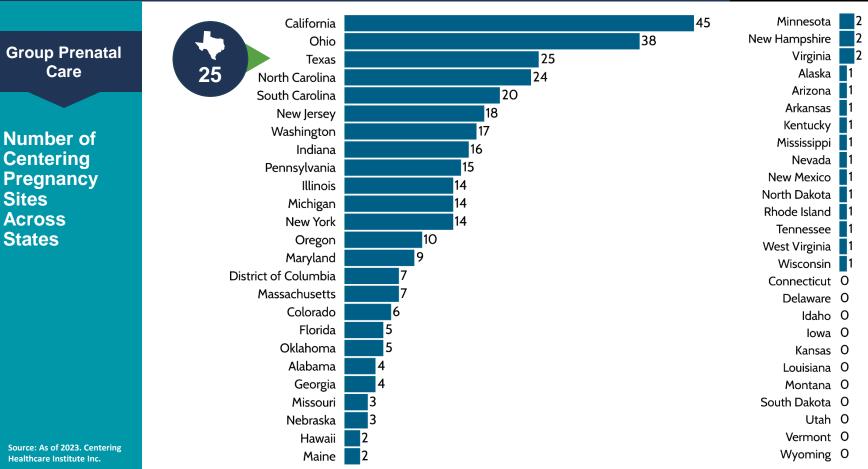

- Approximately two more prenatal visits among participating Black women with high-risk pregnancies compared to women in individual care (H)
- Cases of probable depression decreased by 31% for women in group prenatal care compared to a 15% decrease for women in individual prenatal care from the second trimester to 1 year postpartum (A)
- High-stress women in group prenatal care were more likely than women in individual prenatal care to experience a decrease in depressive symptoms postpartum (D)

Optimal Child Health and Development

• The rate of breastfeeding initiation increased by approximately 12 percentage points for women in group prenatal care compared to women in individual prenatal care (C)

@pn3policy #pn3policy

48

STRATEGY EARLY INTERVENTION SERVICES

17states allow **very low birthweight** as a diagnosable or at-risk qualification for early intervention services

6 states allow **at-risk** for delay as a qualifier for early intervention services

34 states have **eliminated family fees** for children receiving EI services

Early Intervention Services

How Does Early Intervention Services Impact PN-3 Outcomes?

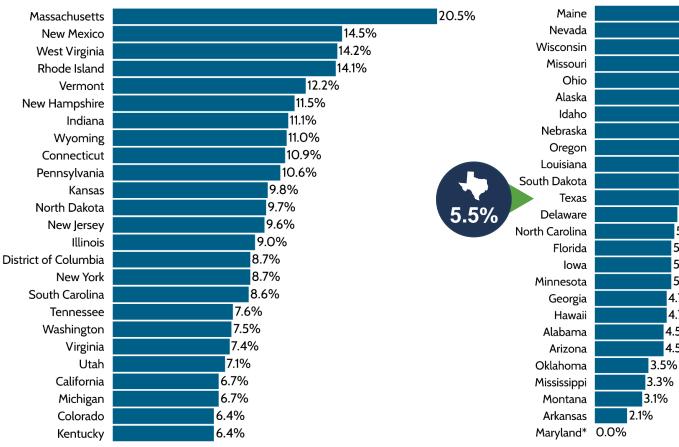

Optimal Child

Health and Development

- Mothers of low birthweight, premature infants who received EI services scored significantly higher on scales of maternal self-confidence (B, D) and maternal role satisfaction than control groups (D)
- A meta-analysis of 31 studies found that EI services had an average effect size of 0.62 on children's cognitive skills and 0.43 on motor skills (F)
- Low birthweight, premature infants who were assigned to EI services saw better cognitive (C, D) and behavioral outcomes (C) at age 3 than infants in control groups
- EI services improved toddlers' receptive language skills relative to a control group (0.35 effect size) (E)

Cumulative % Children Under Age 3 **Receiving El Services**

Sources: Cumulative % served in EI & Point-in-Time % served: As of 2021-2022. **US Department of Education**. **EDFacts** Metadata and Process System (EMAPS) and US **Census Population** Estimates; % babies born low birthweight: Vital Statistics from CDC WONDER 2021 Natality

states have implemented all key policy levers for child care subsidies

Child Care Subsidies

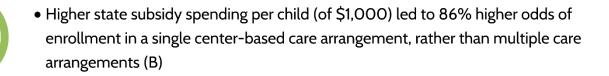

How Does Child Care Subsidies Impact PN-3 Outcomes?

Parents'

Ability

to Work

@pn3policy #pn3policy

- A 10% increase in Child Care Development Fund subsidy expenditures led to a 0.7% increase in mothers' employment rate (A)
- \$1,000 higher annual state subsidy spending per child led to a 3.5 percentage point increase in the likelihood of maternal employment (D)

• Subsidy receipt led to an increase in monthly earnings by 250% (E)

Annual Minimum Wage Earnings + PFL, Minus Out-of-Pocket Child Care Expenses, Plus Net Federal and State Benefits

Summary

- The prenatal-to-3 period of development sets the stage for lifelong health and wellbeing.
- Many children lack the opportunities and rights they deserve for a healthy start, and these children are disproportionately children of color.
- State policy choices can reduce family stressors and increase capacities, which have substantial impacts on health and wellbeing over the life course.
