PROBLEM
Parents are afraid to let their kids walk and bike to school.

SOLUTION
Address safety concerns to improve the health of your community.

1. Safe sidewalks to and from school
2. Enforce traffic speeds in areas around schools
3. Clean and crime free neighborhoods
4. Bike lanes for safer biking
5. Crosswalks and crossing guards near school
6. Other children/families to walk with to school
7. No stray animals
8. School policies to encourage walking and biking

Our Kids Want To Walk the Walk!
Let’s help make sure Texas kids can walk and bike safely to school!
Through the combined efforts of the Texas A&M Health Science Center School of Public Health and The University of Texas School of Public Health, a recent study - **Texas Childhood Obesity Prevention Policy Evaluation (T-COPPE)** - has been investigating the reasons students are not walking to school. Findings from this study and others show parents’ perceptions of the transportation route between home and school are among the key factors determining whether children walk or bike to school.

### THE SITUATION

- Parents want their children to be safe if they are walking or biking to school and right now they don’t necessarily feel they are safe.
- Motor vehicle collisions are the leading cause of death among children ages 3 to 14; in 19% of these fatalities, the children involved were pedestrians.
- Every year, over 32,000 children under the age of 20 are hospitalized for non-fatal traffic-related injuries.
- These statistics show a key reason children are no longer walking or biking to school, giving kids fewer opportunities to be active.
- Only 13% of kids walk to school today, compared to nearly 50% in 1969.
- In a study of adolescents, 100% of kids who walked or biked to school met the daily recommended 60 minutes of moderate to vigorous physical activity (MVPA).
- Kids get 3x more MVPA during their commute to school than they do during recess.
- These studies do not begin to get into many other benefits of increased levels of walking and the creation of safe, walkable places—such as reducing traffic fatalities and serious injuries, increasing property values, decreasing school busing expenditures, improving academic performance, and managing traffic congestion.

### RECOMMENDATIONS

- Increase adoption of and support for Safe Routes to School initiatives.
- Use available federal, state, and local dollars for active transportation.
- Focus on health equity by prioritizing and engaging lower-income communities.
- Eliminate and/or modify state laws, policies, and regulations which discourage community-centered schools.
- Re-develop communities so people can walk and bike not only to school but also for access to work, shopping, food and other life necessities.
- Establishing drop off places for students at the school does relieve some of the congestion/safety issues during the hours when school is starting and ending.
- Reduce and enforce speed limits on city streets around paths to schools to reduce the risk of fatal injuries to children.
