# Vaping with Flavors

**Healthy Children, Healthy State:**

## Teens are vulnerable to vaping and tobacco flavors.

Vaping, or e-cigarette use, is common among Texas teens, even though the minimum legal age to purchase e-cigarettes is now 21. Teen vaping in Texas is a public health issue.

### Flavored Tobacco Crisis

- In the US, 6.2 million teens use tobacco products. Most of them (70%) use flavors.¹
- These numbers are worse in Texas, where 80% of teens who use tobacco use a flavored product like strawberry e-cigarettes, menthol cigarettes, and grape cigars.²
- Studies show that flavors in tobacco appeal to new users³ and addict current users.⁴

<table>
<thead>
<tr>
<th>Causes of the Crisis</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Nearly 16,000 different flavors of e-cigarettes are currently on the market.⁵</td>
</tr>
<tr>
<td>• These products are sold in vape shops, gas stations, as well as online, and - with a few exceptions - are mostly unregulated by the state or federal government.⁶⁻⁸</td>
</tr>
<tr>
<td>• Teens think flavors make vaping less dangerous and nicotine less addicting.⁹⁻¹²</td>
</tr>
</tbody>
</table>

Nearly 80% of teen e-cigarette users say they would stop using the products altogether if sales of flavored e-cigarettes were restricted.

## We can prevent teen tobacco addiction fueled by flavors:

- Restrict the sale of flavored e-cigarettes and other tobacco products.
  - States like Michigan, Montana, and Utah recently issued temporary restrictions on the sale of flavored e-cigarettes in order to curb use among kids.
  - States like Rhode Island and New Jersey recently restricted the sale of flavored tobacco products, such as menthol cigarettes.
  - When these laws are passed, studies show tobacco use among teens drops by 5% in the first 6 months.¹³
- Strengthen the enforcement of current Texas age verifications laws for both online and in-person sales of e-cigarettes and other tobacco products to ensure retailers are not selling to kids.
- Fund educational programs in schools, such as the CATCH My Breath E-Cigarette Prevention Program,¹⁴ could reduce the the number of kids who use e-cigarettes by as much as 40%.
