You are invited to take part in the research study called, “Diabetes Impact Study” conducted by Joseph McCormick of the University of Texas Health Science Center. Your decision to take part is strictly voluntary and you may refuse to take part, or choose to stop taking part, at any time. A decision not to take part or to stop being a part of the research project will not change the services that are otherwise available to you. You may refuse to answer any questions on any forms if you wish, and this will not affect your opportunity to take part in the studies of your blood or physical condition. You can ask questions at any time of the individuals who are interviewing you. This research project has been reviewed by the Committee for the Protection of Human Subjects (CPHS) of the University of Texas Health Science Center at Houston as Protocol Number HSC-SPH-03-007-B.

Purpose of the Study:
This study is being done to help scientists: 1) learn more about factors that cause diabetes, its complications and related diseases like heart disease and obesity, 2) learn how often people have diabetes in the south border region 3) learn why the complications of diabetes and related diseases like obesity and heart disease develop and 4) find the genes that are involved in this process and how they work 5) investigate the association of generic differences related to inflammatory responses as they relate to obesity, anxiety, and depression. Taking part in this study may not lead to any immediate benefit for you or your family, but may lead to a better understanding of diabetes, its complications, and related diseases like heart disease, and obesity. A better understanding may then help to prevent or lower the problems caused by these diseases.

Procedure:
If you agree to be in this study, you will be asked to have a medical examination
In Brownsville at the Hispanic Health Research Center, Clinical Research Unit of the University of Texas Health Science Center at Houston-Brownsville Regional Campus at Valley Baptist Medical Center-Brownsville (Edelstein Professional Building), 800 West Jefferson Street, Suite 230.
In Laredo at the Clinical Research Unit if the University of Texas Health Science Center San Antonio-Laredo Regional Campus located at 1937 Bustamante St. Room 1.105.
In PSJA area at Sotomayor Clinic located at 1200 E Polk St, Pharr, TX.

An appointment will be made for this examination at a time that is convenient for you. The examination will take about 2 ½ to 3 hours. You cannot eat or drink anything, except water, 10 hours before the examination. On the day of your examination, your blood pressure, weight, height, waist and hip circumference, and body fat will be measured. A test of your heart (electrocardiogram) will be performed. You will also be asked questions about your health, physical activity, nutrition, mental health, depression and anxiety.

A sample of blood (about 2.7 tablespoons or 40 ml) will be taken from a vein to test your blood sugar, cholesterol, triglycerides, complete blood count (CBC, which provides information about the kinds of blood cells and their numbers in your body), and related factors. The white blood
cells from your blood samples will be isolated and preserved since they are present in everyone’s blood and contain the genetic code called DNA. They also contain RNA. DNA and RNA codes help explain why we look different; these differences can also help explain why some people develop certain diseases and others do not; and why some people react better to certain drugs than other people. This study will use the DNA and RNA to find genes that cause diabetes, its complications and related diseases like heart disease and obesity. If at any time you wish your stored DNA to be destroyed, you may request this and we will make every effort to make sure this is done promptly.

We are also asking that you give us a urine sample. Your sample will be used for tests related to long term complications of diabetes such as kidney function tests. If you agree, our research staff gives you instructions on how to collect the urine sample and a cup to do so.

**COLLECTION AND STORAGE OF SPECIMENS**

The purpose of this sub-study is to learn more about factors that cause diabetes, its complications and related diseases like heart disease and obesity.

*Please answer (circle) Yes or No for each statement below:*

**YES NO I agree to allow my samples to be tested for factors related to Type 2 Diabetes for this study.**

**YES NO I agree to allow my samples to be stored for up to 5 years after the study ends at the research laboratory at the University of Texas Health Science Center at Houston, School of Public Health-Brownsville Regional Campus for future use studying factors Type 2 Diabetes. Afterwards, my samples will be destroyed.**

**YES NO I agree to allow my samples collected for this study to be stored for any future studies done by the Principal Investigator.**

**YES NO I agree that anonymous information about my samples collected for this study may be made available to qualified researchers outside of this study for future studies related to Type 2 Diabetes.**

**YES NO I agree that anonymous information about my samples collected for this study may be made available to qualified researchers outside of this study for any future studies.**

**YES NO I wish to be contacted if there is any development of clinically relevant information.**

**YES NO I agree for the results from my specimen testing to be released as directed in the PHI section below.**

*If you agreed to allow your samples collected for this study to be stored, your blood samples will remain in the study for 5 years after the study ends.*

*You will not receive any medical results from this study.*

After your blood is obtained, a trained staff member will measure your weight, height, waist and hip circumference. To measure your weight you will be asked to take off your shoes and step onto a scale. Your height will be also measured with your shoes off while you stand straight. You will have your waist measured with a non-stretching measuring tape placed around the navel part of your body. Your blood pressure will be measured 3 times in the dominant arm and
then another 3 times in the opposite arm, after you have rested for a few minutes. You will be asked not to speak during the time that we are measuring your blood pressure. A blood pressure cuff will be wrapped around your arm and inflated to take these measurements. Next we will measure the activity of your heart using a machine called an electrocardiogram. You will have to lay down and have 10 patches placed on your chest, on your hands and feet to measure your heart activity. We will measure your body fat, you will have to lay down and rest for 5 minutes, and have 4 patches placed on your hand and foot, which is the reason you will need to remove your socks.

We will then ask you a series of questions to learn what foods you eat; the condition of your heart; other medical history information; questions about depression and anxiety, the names, ages, and condition of your health, and about the health of your children, brothers and sisters, parents and grandparents. We will ask questions about your physical activity, nutrition, mental health, depression, and anxiety.

In some instances your close relatives (spouse, parents, sibling and children) may be contacted to take part in the study at a later date. You may have the opportunity to come in for repeat testing.

**Time Commitment:**
If you agree to take part, the whole exam will take about 2 and ½ to 3 hours.

**Benefits:**
You or your family may receive no direct benefit from being in this study; other than knowing your blood sugar, cholesterol, and triglyceride and complete blood count levels. However, your participation may lead to a better understanding of diabetes, its complications, and related diseases like heart disease and obesity. A better understanding may then help to prevent or lower the problems caused by these diseases.

**Risks and/or Discomforts:**
All tests and examinations will be carried out by trained personnel such as medical doctors, nurses or technicians. The risks involved with study participation are minimal. You may experience some small discomfort when the blood is drawn and that a small black and blue spot may develop at the site where the blood was obtained. If this occurs, it need not cause any alarm and will usually go away within 2 or 3 days. Applying local heat may help it go away sooner. Because of the nature of the questions that we will ask you, there is a slight risk of emotional discomfort. For example, there are questions about mental health that could make some people uncomfortable. Although the interviews involve no specific physical risk or discomfort; you may feel uncomfortable. Experience interviewers will conduct the interview. You may choose not to answer any of the posed questions. If you or any member of your family has concerns about this study, you may discuss them with the person that is conducting the interview.

By taking part in this study, there is a risk of the possible loss of your privacy (name, address, etc.). No information will be shared with others outside of this research project unless otherwise specified. Although not intended, loss of your privacy could include discovering information that may impact your family, paternity status, insurability, employability, or immigration status.

**Alternatives:**
If you are concerned about any of the procedures described above, the only alternative is not to take part in the study.
Study Withdrawal:
There may be instances where the PI may withdraw you from the research study. Reasons that your taking part in this study may be stopped include: The principal investigator, the study doctor, the federal government, or CPHS stops or suspends the research of diabetes and diabetes related disorders or stop this generic research study.

During and after the study, you will have the right to have your sample destroyed at any time. If you decide to have your sample destroyed, any data or analysis that were done before the request, cannot be removed, however no further testing will be done and all remaining samples will be destroyed. This means that if you decide to withdraw from this additional research, your data collected prior to withdrawal may still be used up to the point of withdrawal.

Confidentiality:
You will not be personally identified in any reports or publications that may result from this study. Any personal information about you that is gathered during this study will remain confidential to every extent of the law. A special number will be used to identify you in the study and only the investigator or those collecting the information will know your name. The information will be kept in a secure location. Please understand that representatives of the Food and Drug Administration (FDA), the Committee for the Protection of Human Subjects, and the sponsor of this research may review your research records for the purposes of verifying research data, and will see personal identifiers.

The human derived biological sample (HDBS) bank administered by the University of Texas Health Science Center Houston (UTHSC-H) will remain with UTHSC-H unless the UTHSC-H agrees to release and/or transfer the samples. Please be aware that if the PI leaves the University, the samples within the HDBS bank will remain the property of UTHSC. The University’s ownership includes the right to transfer ownership to other parties, including commercial sponsors.

The Principal Investigator, Joseph McCormick, or the subject does not have any ownership or proprietary interest in the HDBS.

The UTHSC-H will require anyone who works with your samples to agree to hold the information and any results in confidence.

Information about how this study will use your Protected Health Information (PHI)
Taking part in the study will require the researchers to have and to use private information about you and your health. It will also be necessary for the researchers to permit other groups to see records that contain information about you and your health. The federal privacy regulations only permit the researchers to collect, use or share your identifiable health information if you give them your permission to do so.

Research policies require that private information about you be protected and this is especially true for your health information. However, the law sometimes allows or requires others to see your information. The information given below describes how your privacy and the confidentiality of your research records will be protected in this study.

What is Protected Health Information (PHI)?
Protected Health Information is information about a person’s health that includes information that would make it possible to figure out who the person is. According to the law, you have the right to decide who can see your protected health information. If you choose to take part in this research study, you will be giving your permission to the investigators and the research study...
staff (individuals carrying out the study) to see and use your health information for the study. In carrying out this research, the health information we will see and use about you will include:

- your medical history and blood work,
- pathology and results of medical tests,
- information from interviews or from questionnaires,
- demographic information like your age, marital status, the type of work you do and the years of education you have completed.

We will get this information from the study procedures that will be done, by asking you, asking your doctor, and/or by looking at your chart at University of Texas Health Science Center at Houston.

How will your PHI be shared?
Because it is research, we will be unable to keep your PHI completely confidential. We may share your health information with people and groups involved in conducting and overseeing this research study including:

- The sponsor of the study.
- The members of the local research team and collaborators; and
- The Institutional Review Board and the Compliance Office of the University of Texas Health Science Center at San Antonio and Houston, and other groups that oversee how research studies are carried out.

Parts of your PHI may be photocopied and sent to a sponsor or data coordinating center, as appropriate, or it may be transmitted electronically, such as by e-mail or fax.

Some groups receiving your PHI may not be obligated to keep it private. They may pass information on to other groups or individuals not named here.

How will your PHI be protected?
In an effort to protect your privacy, whenever possible, the study staff will use code numbers instead of your name, to identify your health information. Initials and numbers will be used on any transmission of your study records, and other study materials containing health information that are sent outside of University of Texas Health Science Center at Houston for review or testing. If the results of this study are reported in medical journals or at meetings, you will not be identified. Your PHI will have identifiers if added to the Rio Grande Valley Information Exchange or the Texas Cancer Registry or to other providers as specified below.

Do you have to allow the use of your health information?
You do not have to allow (authorize) the researchers and other groups to see and share your health information. If you choose not to let the researchers and other groups use your health information, there will be no penalties.

After you enroll in this study, you may ask the researchers to stop using your health information at any time. However, you need to say this in writing, by signing the opt-out form. If you tell the researchers to stop using your health information, the study staff will stop collecting new health information from you and about you for this study. However, the study staff will continue to use the health information collected up to the time they sign the form.

Can you ask to see the PHI that is collected about you for this study?
The federal rules say that you can see the health information that we collect about you and use in this study. Contact the study staff if you have a need to review your PHI collected for this study.

How long will your PHI be used?
By signing this form, you agree to let us use and disclose your health information for purposes of the study. The permission to use your personal health information expires when the research ends and all required study monitoring is over.

Your Personal Information and Results:
The results will not be given to members of your family, your personal physician, or other third parties unless otherwise specified.

All results from the examinations will be explained to you and, if you request, will be sent to your doctor.

Authorization for the Use and Disclosure of Protected Health Information (PHI)

Sharing information with providers through Rio Grande Valley Health Information Exchange (RGV HIE) helps clinicians provide better care for patients by not duplicating tests and having more complete information about the patient’s medication and other treatment history.

Participants may choose not to share information through the health information exchange. If you decide not to share information, you will be asked to sign an “opt out” form.

“The ultimate goal and purpose of the Texas Cancer Registry (TCR) is to collect, maintain, and disseminate the highest quality cancer data that will contribute towards cancer prevention and control, improving diagnoses, treatment, survival, and quality of life for all cancer patients”.

I hereby authorize the University of Texas Health Science Center Houston to access and/or release the following information from the medical records of the participant identified above to the Rio Grande Valley Health Information Exchange, the Texas Cancer Registry, and the Centers for Disease Control and Prevention’s (CDC) National Center for Health Statistics.

I understand I have the right to revoke this authorization in writing at any time except to the extent that action has been taken in reliance upon it. I understand that I may revoke this authorization by sending, via mail or facsimile, a written notice to the following individuals/organizations stating my intent to revoke this authorization.

Please Initial

___ Rio Grande Valley Health Information Exchange
   1816 East Harrison Ave., Ste. A
   Harlingen, Texas 78550
   Phone: 956-622-5801    Fax: 866-650-8035

___ TDHS- Texas Cancer Registry
   Department of State Health Services
   P.O. Box 149347
   Austin, TX 78714-9347

IRB NUMBER: HSC-SPH-03-007-B
IRB APPROVAL DATE: 06/04/2018
The information to be released to the Principal Investigator will include (please initial in appropriate box)

___ Complete Clinical Records
___ Other _______________________________________

I understand that the University of Texas Health Science Center (UTHSCH) may not withhold or condition treatment based on my completion of this authorization form.

I understand that the records used and disclosed pursuant to this authorization form may include information relating to: drug or alcohol abuse, or mental or behavioral health or psychiatric care.

In the case of an adverse event related to or resulting from taking part in this study, I authorize the researchers listed above to access test, treatment and outcome information about the adverse event from the treating facility.

Cost, Reimbursement, and Compensation:
You will receive a $50.00 gift card as compensation for taking part in these studies.

If you are going to receive payment for taking part in this study, you will be asked to complete a W-9 form that will be sent to the UT accounting department. If you receive more than $600 from UT Health for being in research studies this year, you will be given a 1099-MISC form for tax reporting purposes.

If you decide to allow your samples to be stored, you are providing your sample to be used by the University of Texas Health Science Center at Houston. The UTHSC-H owns any use of the results, treatments or inventions that can be made from the research. You will not be paid for any use of your samples or results.

In Case of Injury:
If you suffer any injury as a result of taking part in this research study, please understand that nothing has been arranged to provide free treatment of the injury or any other type of payment. However, all needed facilities, emergency treatment and professional services will be available to you, just as they are to the community in general. You should report any such injury.

In Brownsville to Rocio Uribe at (956) 755-0695
In Laredo at (956) 523-7533
In PSJA area at (956) 243-0594
Also call the Committee for the Protection of Human Subjects at (713) 500-7943.
Questions
If you have any questions regarding this study or results of the tests, which have been done on your blood, please feel free to contact the same phone numbers listed above. In addition, you can contact Joseph McCormick Principal Investigator, office located at the School of Public Health Brownsville Regional Campus SPH Building S100, Brownsville, Texas 78520, or call (956) 755-0605

Signatures:
Sign below only if you understand the information given to you about the research and choose to take part. Make sure that any questions have been answered satisfactorily and that you understand the study. If you have any questions or concerns about your rights as a research subject, call the Committee for the Protection of Human Subjects at (713) 500-7943. If you decide to take part in this research study, a copy of this signed consent will be given to you.
