This guide is intended for MS students entering in Fall 2015. Although much of the content is also applicable to students who entered prior to this time, MS students who entered prior to Fall 2015 should cross reference the information in this guide with the requirements specified for their degree at the time they entered the program.

   Environmental Health and Safety 21
   Student Research 22
I. WHAT ARE THE THESIS REQUIREMENTS?

Students in the Master of Science program are required to complete a written research thesis that demonstrates appropriate depth of knowledge in the field of study.

This guide provides an overview of the steps required to complete the thesis. This guide provides an overview of the steps required to complete the thesis.

II. WHAT IS THE ROLE OF THE STUDENT’S THESIS COMMITTEE?

The thesis committee includes the student, his/her academic advisor and an additional member from UTSPH who represents the student’s minor discipline. Students who have elected to pursue a concentration must also include a representative from that concentration on their committee. Additional committee members, who bring specific expertise to the committee, are optional.

Additional details about the thesis committee composition for can be found at:

https://sph.uth.tmc.edu/academics/degree-programs/.

Students should also check their Divisional website for information specific to their degree program.

Forms for adding or changing committee membership:

https://sph.uth.tmc.edu/current-students/student-forms/

*What is the student’s role on the committee:* As a member of the committee, the student should coordinate committee meetings. Although students meet with their committee twice each year, these meetings are generally insufficient for discussing the details of the thesis. Consequently, additional meetings, specifically for review and discussion of the thesis, are generally required. Such meetings can save the student and other committee members time, and minimize the potential for confusion that can occur when the student must try to integrate multiple (and sometimes conflicting) opinions without the benefit of everyone talking together. The number and duration of such meetings will depend on the specific project and committee. In general, it may be helpful to have meetings:

- Prior to writing the proposal
- After all committee members have read a final, or near-final, version of the proposal
- After all committee members have read a final, or near-final, version of the final thesis

Committee meetings are typically scheduled several weeks in advance to accommodate the committee members other professional obligations.

The student should also coordinate meetings with individual committee members as needed. In general, the student should meet a with a key committee member as often as every other week. The frequency of meetings with other committee members will depend on their roles on the project.
What are the roles of the other committee members? The committee members serve many different roles including: scientific advisor, editor, mentor and advocate. Individual members may serve in one or more of these roles. The committee or individual members of the committee work with the student to develop the proposal, obtain necessary institutional approvals (e.g. IRB, animal welfare), and assist with the execution of the proposed project and completion of the final thesis document. In general, committee members should provide feedback on all written documents and requests within two weeks of submission by the student.

The faculty and other professional members of the committee are responsible for the approval of the scientific integrity of both the thesis proposal and the final written paper.

III. WHAT STEPS ARE INVOLVED?

The thesis requires several steps:

- Identification of a project
- Preparation of a proposal
- Review and approval of proposal by WCE committee
- Review and approval of proposal by the Associate Dean for Research (ADR), UTHSC IRB (if applicable), other IRBs (if applicable)
- Completion of the proposed work
- Preparation of the final WCE document
- Public presentation of the WCE project

Each of these steps is described below. However, even before you have selected your project, it is important to ensure that you have, or have a plan to acquire, the basic skills required to complete the thesis, including:

Basic writing skills: The UTSPH does not provide course work in basic writing skills. However, such courses, including in-person and online English as a Second Language courses, are available through several local institutions, including:

- Austin: Austin Community College: [http://www.austincc.edu/](http://www.austincc.edu/)
- Brownsville: UT Brownsville: [http://utb.edu](http://utb.edu)
- Dallas: Dallas Community Colleges: [http://www.dcccd.edu](http://www.dcccd.edu)
- El Paso: El Paso Community College: [http://www.epcc.edu](http://www.epcc.edu)
- Houston: Houston Community College: [http://www.hccs.edu](http://www.hccs.edu/)
- San Antonio: Alamo Colleges: [http://www.alamo.edu/](http://www.alamo.edu/)
Scientific writing skills: Following are recommended resources to help students develop their scientific writing skills:

Textbooks

Online writing resources

The Writing Center at the University of North Carolina: [http://writingcenter.unc.edu/handouts/](http://writingcenter.unc.edu/handouts/)
Purdue University Online Writing Laboratory (OWL): [http://owl.english.purdue.edu/owl/](http://owl.english.purdue.edu/owl/)

Use of electronic and library resources: The UTSPH library provides formal training on the use of on-line searching techniques and reference management software. In addition, members of the library staff are available to provide one-on-one training and assistance. [http://www.sph.uth.tmc.edu/library/](http://www.sph.uth.tmc.edu/library/)

The Texas Medical Center library also offers classes on a variety of topics: [http://library.tmc.edu/services/classes-and-workshops/](http://library.tmc.edu/services/classes-and-workshops/) (classes and tutorials)

III-A. Identification of a Project

It is never too early to start thinking about topics for your thesis. There are many potential sources of ideas, including: faculty, staff and students; co-workers and other colleagues; journals; classes; seminars; and professional meetings. Projects that are largely complete or that have been completed prior to writing your proposal, including work that has been submitted for publication or previously published, may not be used for your dissertation proposal.
As you begin to think about your thesis topic, it may help to keep a notebook or journal that includes project ideas, notes from discussions and seminars, lists of additional people to talk with, and articles on topics of interest. Once you have identified a potential project, it may be helpful to prepare a short overview, summarizing the relevant background information as well as the aims and significance of the proposed project, which can be shared and discussed with your committee members.

The School’s website offers several features that can help you to find out about the research interests of the faculty.

The online faculty directory includes brief descriptions of each faculty member’s research interests. The directory can be filtered by Division, Campus or Center and can also be searched for specific keywords

- [https://sph.uth.tmc.edu/faculty/](https://sph.uth.tmc.edu/faculty/)
- The Office of Research webpage includes lists of recent publications by the faculty as well as recently funded grants
- [https://sph.uth.tmc.edu/research/office-of-research/](https://sph.uth.tmc.edu/research/office-of-research/)

The project that you select should be of interest to you and relevant to your future career goals. However, it should also be feasible to carry-out given available resources and within a reasonable time period. It is very important that you pick a project that fits with your skills (e.g. statistical, qualitative and analytic). Consequently, once you have identified a potential project, it is essential that you discuss both the scientific and practical aspects of the project with your committee members and any others who would play a significant role in the project. Do not be discouraged if your first project idea is determined to be inappropriate, for either scientific or practical reasons. It is not unusual to identify two or three potential projects before an appropriate project is identified. Working through the scientific and practical issues of each potential project provides valuable experience and perspective and is part of the learning process.

**When should the thesis project be started?** Although it is never too early to start thinking about ideas for your thesis project, planning the project and writing the proposal will require the synthesis of knowledge and experiences gained in the classroom. Consequently, the bulk of the thesis project is undertaken after sufficient public health knowledge and skills have been acquired. The process is generally initiated at least 12 months prior to the deadline for submitting the final documents in the semester that you plan to graduate.

**TIMELINE:** The time required to identify a thesis project is extremely variable. It can take several weeks for master students to identify a suitable project.
III-B. Preparation of the Proposal

Once you and your committee have agreed on an appropriate project for the thesis, the next step is to write a thesis proposal.

**What is the purpose of the proposal?** The proposal is a requirement for all MS students, and serves several purposes. First, the proposal prepares you for the work that will be required to complete your thesis project. As you write your proposal, you are gaining important background knowledge that will help to guide your project, as well as working through the logistics required to complete each step of the project. The proposal also serves as a contract between you and your committee. It is a statement of the goals that you have agreed need to be met to complete the thesis and move forward towards graduation. Your proposal may also be required to obtain the institutional approvals (e.g. IRB) needed before the project may be initiated.

**Is there a specific format for the proposal?** The UTSPH does not require a specific format (margins, font, etc.) for the thesis proposal. In general, double-spaced text with 12-point font and 1 inch margins is appropriate for the proposal. Page numbers are also recommended. Check with your committee to determine their preferences on specific structure or style (e.g. APA style) for the references and/or bibliography.

- Style Templates are available for the *final* thesis. If desired, these templates can also be used for the thesis proposal. The templates are provided for formatting style and “construction,” not content. Templates can be found at: [https://sph.uth.edu/research/student-research/](https://sph.uth.edu/research/student-research/)

**What should the proposal include?** The length and specific content of your proposal will be determined by your committee. In general, MS proposals are not longer than 15 double-spaced pages (1 inch margins, 12-point font) and should include the following sections:

- **Background/Introduction and Public Health Significance**
  This section should provide a review of the relevant literature. The level of detail that you provide in this section will be determined by you and your committee members. At a minimum, you should provide the background information that a general reader would require to understand the topic of your project and the rationale for the proposed work. This section should also include a discussion of the public health significance of your specific project.

- **Specific Aims/Hypotheses/Objectives/Research Questions**
  This section should include a statement of the research question, hypothesis, specific aims and/or objectives of your project. The best approach for setting up this section will depend on your specific project and should be discussed with your committee. This section may also include a brief discussion of the rationale for the proposed project and/or a brief description of the approach that will be used to meet the stated goals.
• **Methods**

The content of this section will depend on your specific project. However, all proposals must include details of the methods that will be used to address the study aims/hypotheses or objectives. The methods section should include the following considerations, as appropriate to your proposed work:

  o Study design
  o Study setting, including locations and dates
  o Study subjects
  o Sample size calculations and/or study power
  o Data collection
  o Data analysis, including statistical, laboratory and other methods that you will use to address your study aims, hypotheses or objectives
  o Human subjects, animal subjects, and/or safety considerations

The methods section tells the reader exactly “how” you are going to achieve your aims and/or answer your research questions. It is important to be as specific as possible in this section. For example, stating that you will use logistic regression to analyze your data is not sufficient. Rather, you need to state what independent and dependent variables will be used as well as what potential confounders and effect modifiers will be considered. Additional details, such as how variables will be coded, can also be helpful. Further, you should indicate how the analyses will be interpreted (e.g. p-values, odds ratios and 95% confidence intervals).

When organizing the methods section, it is often helpful to re-state each aim and follow it with the details of the specific methods that will be used to achieve that aim. It is also important that you use past and present tense appropriately in this section. For example, if you will analyze previously collected data, sections on study design, setting and subject recruitment should be written in the past tense (e.g. someone collected the data in the past), whereas sections on data analysis should be written in the future tense (e.g. you will analyze the data in the future, after your proposal is approved). It is extremely important that you clearly delineate the work that you will do from the work that has already been done.

• **References/Bibliography**

This section should include complete references for all literature, websites, books, and other materials referenced in your proposal. There is no required format for the references in your proposal. It is, however, recommended that you use reference management software, such as RefWorks. RefWorks is available free of charge to UTSPH students, and information and training on RefWorks is available through the UTSPH library:

Other Sections

Your proposal may include other sections as appropriate for your project or as required by your committee. Examples of other sections that you might include are:

- **Preliminary data:** Work that is largely complete or that has been previously completed, including work that has been submitted for publication or previously published, may not be used in place of the thesis. If you have already started to work on your project, for example for a practicum or as a graduate research assistant, you should include a summary of the work that has already been done leading up to the proposed project.

- **Results:** If you include this section, it would provide an outline of how your results will be presented and mock-ups of the tables and/or figures that will be used to present your data.

Preparation of your proposal is an interactive process that involves your committee members. As you begin your proposal, you should work with your committee members to establish how they will review drafts of your proposal. Often, one member of your committee will serve as a primary reviewer for your initial draft(s), while the other members will review only later drafts or specific sections of the proposal.

In general, your proposal will require several drafts and edits before it is finalized. It is reasonable to assume that, on average, it will take two weeks for committee members to provide feedback on each of your drafts and that two to four drafts will be required before the proposal is finalized.

**What approvals are required?** Your proposal must be approved by all advisory committee members and the UTSPH Associate Dean for Research. In addition, your proposal may need to be submitted to and approved by:

- UTHSC Committee for the Protection of Human Subjects (CPHS, which is the IRB)
- Other institutional IRBs (e.g. for data collection at an institution outside of UTHSC)
- UTHSC Animal Welfare Committee
- UTHSC Biosafety/Chemical Safety Committees

To determine whether your project requires such approvals, as well as for additional information on the approval process, please refer to the UTSPH Research Compliance Guide, which is included in the Appendix to this Guide, and is available on the Schools’ website:

[https://sph.uth.tmc.edu/research/office-of-research/student-research/](https://sph.uth.tmc.edu/research/office-of-research/student-research/)
What forms must be submitted with the proposal? Once your committee has signed off on your proposal and you have received all necessary institutional approvals, you will need to submit the proposal and additional paperwork (see below) to the UTSPH Associate Dean for Research (ADR) for approval through the Office of Research.

Students must submit a printed proposal along with signed forms/documents to the Office of Research for approval, as well as an electronic copy of the proposal itself (without the forms). Proposal forms and complete submission instructions can be found online at the Office of Research: https://sph.uth.tmc.edu/research/office-of-research/

All thesis proposals require the following forms/documentation:

- Student Proposal Cover Sheet
- UTSPH Student Proposal Institutional Approval Document
- Authorship, Publication Plan, and Data Ownership form
- Certification of student’s completion of a course on the protection of human subjects through the Collaborative Institutional Training Initiative (CITI):
  - https://www.citiprogram.org/

Additional forms/documentation may be required, such as:

- Data Handling Procedures (for use of existing data)
- Letter of permission for use of data (if you plan to borrow data that are not publicly available)
- Letter documenting that the student is included on, and project is covered under an existing Committee for the Protection of Human Subjects (CPHS) protocol – from the Principal Investigator of the approved protocol (as appropriate)
- UTHSC CPHS documentation that study is exempt or approved (projects using human subjects or human-derived data or samples, including public data)
- UTHSC Animal Welfare Committee documentation (project using animals)
- UTHSC Institutional Biosafety/Chemical Safety Committees (as appropriate)
- Certificate of completion from appropriate institutional safety courses (e.g. animals; biohazardous substances, chemical, radioactive materials; microbiological, biological, infectious agents or recombinant DNA)

Approval by the ADR requires that all appropriate forms/documents have been submitted and are complete and accurate. If your project requires CPHS or other approvals, and such approvals are pending, you may submit all other documents to the ADR for preliminary review. However, final approval by the ADR will require appropriate documentation from all relevant committees.
**What are the enrollment requirements?**

You must be enrolled for at least three credit hours during the semester in which the proposal is submitted and in every semester after you submit your proposal until you graduate.

**TIMELINE:** Completion of the thesis proposal will generally take at least one month and may require several months, depending on the number of revisions required by your advisory committee. Projects that require CPHS or other institutional approvals will generally take longer than those that do not require such approvals.

The thesis proposal must receive written approval by the ADR and all relevant institutional committees NO LATER THAN the Proposal Approval deadline for the semester in which you intend to graduate. Students should refer to the School’s website for information about other deadlines related to graduation:

https://sph.uth.tmc.edu/current-students/planning-to-graduate/

---

**III-C. Completion of the proposed project**

The requirements for this step vary considerably from project to project. While the thesis proposal provides an outline of the work that needs to be accomplished, the student and committee members must work together to determine the details of how and when that work will be accomplished.

The successful and timely completion of any project requires communication, organization and time management. Hence, it is essential that you meet with your committee members to develop a work plan and timeline. Issues that should be addressed during this meeting include:

- The role of each committee member
  - often, you will work more closely with one member than the others
- Meeting schedules
  - how often will you meet with the entire committee? individual members?
  - optimally, you will meet at least every other week with a least one member of the committee
- Mechanism(s) for providing updates between meetings
  - e.g. emails, summary reports etc.

As you are working on your project, it is important to adjust your work plan and timeline so that they remain realistic. If your work plan changes substantially, relative to what was included in your approved proposal, it may be necessary to submit a proposal amendment memo for review by the ADR as well as protocol amendments to other relevant committees (e.g. CPHS).

**TIMELINE:** In general, it will take 1-6 months to complete a thesis after all appropriate approvals have been received.
III-D. Preparation of the final thesis

The thesis proposal will provide the starting point for your final thesis document. However, you may need to update the Background section to reflect any new developments in the field. In addition, you may need to expand and/or revise the Methods section to accurately reflect the procedures that were used. You will also need to write the sections that were not included in your proposal (e.g. Results and Discussion) and update your references.

Is there a specific format for the final thesis?

The final thesis document can have one of two general formats:

- Thesis without journal article
- Thesis with journal article(s)

Templates for these two formats are available at:

https://sph.uth.edu/research/student-research/

These templates are designed to assure that standards of style and document “construction” are met. They are not intended to define the specific content of the thesis. Use of these electronic templates is optional, but they must be consulted for the appropriate construction (margins, page numbering, style, etc.) of the final document. Use of the Style Template Checklist (see link above) is required when formatting your thesis in a program other than Word (i.e., LaTeX).
**What should the final thesis document include?**

There is considerable flexibility in the manner in which you present your thesis. In general, the final document will include the following sections:

- **Abstract**
  The abstract is a concise summary (~350 words) of the background, methods, primary results and conclusions of your thesis.

- **Background/Introduction and Public Health Significance** (previously described)
- **Specific Aims/Hypotheses/Objectives** (previously described)
- **Methods** (previously described)
- **Results**
  This section should describe your findings or accomplishments, without comment or discussion. Findings may be presented in tables and figures as well as text.

  If the project has been, or will be submitted for publication, the journal article (conforming to the style of the journal to which it has been/will be submitted) may be included as a chapter within the results section. Any additional findings, not included in the article, should be included as a separate chapter in the results section.

- **Discussion/Conclusions/Recommendations**
  In this section, the results of your project should be discussed relative to what is already known about the topic. In addition, the conclusions and/or recommendations that can be made based on the results of the project should be stated. Finally, the strengths and limitations of the project should be described.

- **References/Bibliography** (previously described)

**What institutional approvals are required?**

The final thesis must be approved and signed by all student advisory committee members. One or two revisions are often required before the final thesis is approved. The final thesis document must also be reviewed by the Office of the ADR to ensure that it conforms to all structural requirements. The ADR format review will be completed online, after the student advisory committee has approved the document and the student has uploaded the final thesis to Proquest/UMI.

**TIMELINE:** The final thesis signature page must be submitted to the Research Office by the deadlines indicated on the SPH calendar in the semester you intend to graduate. Students should refer to the School’s website for information about these and other deadlines related to graduation:

[https://sph.uth.tmc.edu/current-students/planning-to-graduate/](https://sph.uth.tmc.edu/current-students/planning-to-graduate/)

As with all of the steps in the thesis, the time required to complete the final written document can be quite variable.
III-E. Public presentation of the thesis project

Successful completion of the thesis includes a public presentation. This presentation may be based on either the proposal or on the completed project. The decision as to when to conduct the oral presentation is determined by the student and the advisory committee. Presenting the project at the proposal stage has the advantage of allowing for input from individuals outside of your committee, which may be helpful as you move forward with your project, and can help to reduce your workload as you approach graduation.

Although there is not a specific format for the public presentation, it is suggested that you use a standard software package (e.g. Power point) to develop your talk. You should provide drafts of your slides to your committee, and practice your talk at least once with your committee members. Additional practice sessions with other students or colleagues can also be helpful. You should be able to present your work without, or with minimal reference, to written notes and be prepared to answer questions from the audience. It is also important that you are able to go through your entire presentation in the allotted time.

**Setting up the presentation:** The time and venue for the presentation are determined by the student’s advisory committee and Division. Options include presentation as part of a School or Division-wide seminar or an individually scheduled public presentation. This requirement is best completed at least two weeks prior to the last day of class in the semester that the student plans to graduate. The final DEADLINE for completion is no later than the last class day.

Students can schedule a room for the presentation by completing and submitting a Room reservation form to Betty Claybon, RAS W130 (Regional Campus students should contact their campus Staff Advisor to schedule a room). The activity must be documented by a public invitational flyer that is distributed at least two weeks before the last day of class, or announcing the defense in the SPH weekly newsletter by forwarding information to Shannon Neufeld at: sphannounce@uth.tmc.edu
IV. WHAT IS THE GENERAL TIMELINE FOR COMPLETION OF THE THESIS?

There is no set time for the completion of the thesis. The amount of time required to complete the thesis is determined by the specific project and the time that the student devotes to the project. In general, this process will require at least six and up to 17 months.

*Proposals requiring full IRB review may take longer.*
APPENDIX

RESEARCH COMPLIANCE
UNIVERSITY OF TEXAS SCHOOL OF PUBLIC HEALTH
2015-2016
All research conducted by the faculty, students and staff of the University of Texas School of Public Health (UTSPH), including research projects and analyses of research data that are conducted as part of UTSPH courses, must be reviewed and approved or exempted by the appropriate Institutional committees before the research is initiated. At the University of Texas Health Science Center (UTHSC), these committees, which fall under the Office of Research, monitor research compliance related to: Human Subjects Protection, Care and Use of Animals and Environmental Health and Safety.

UTHSC Office of Research: http://www.uthouston.edu/research/
UTHSC Compliance Programs: http://www.uthouston.edu/compliance/

It is the responsibility of the investigator (or course instructor) to ensure that a research project has received all necessary approvals prior to initiating a study, and to require all project staff and/or students to receive appropriate training before initiating any research related activities. It is also the investigator's responsibility to obtain approval for any additions or changes to the study, before they are implemented, as well as to maintain all necessary approvals through completion of the study.

This document provides UTSPH investigators with general information regarding the Institutional training that is available, and the oversight that is required for different types of research. In addition, general questions regarding training and oversight may be directed to Ms. Rebecca Novak at the UTSPH Office of Research. However, investigators should visit the appropriate website for the most up-to-date and complete information, and/or contact the appropriate programmatic official in the UTHSC Office of Research, to ensure that they have obtained all necessary training and approvals before initiating any research project.

Rebecca Novak: x9055 or Rebecca.Novak@uth.tmc.edu

**Student Research:** The information included in this document relates to students as well as faculty and staff. Additional information related specifically to student research is provided at the end of the document.
Human Subjects Protection

Committee for the Protection of Human Subjects (CPHS)

CPHS is the Institutional Review Board (IRB) for the UTHSC Houston. CPHS reviews proposed research as it applies to the individuals being asked to participate as research subjects in order to determine if adequate measures are in place to protect autonomy, safety, emotional health, and financial considerations.

CPHS: http://www.uthouston.edu/cphs/

Most of the research conducted by UTSPH investigators will require review by CPHS. Research that does not require CPHS review includes the following types of studies:

Research Using Animals: Research that is exclusively conducted using animals or animal-derived materials does not require CPHS review. However, such research requires review by the Animal Welfare Committee (see below).

Research Using Simulated Data: Research based solely on data obtained through computer simulations does not require CPHS review.

Research Using Published Literature: Research that is based entirely on published literature (e.g. systematic literature review) does not require CPHS review.

Exempt Status: Many research projects are exempt from CPHS review. However, the investigator cannot make the decision regarding exempt status. Studies that are exempt must be submitted for review in the iRIS online application system, and a determination of exempt status (Exemption letter) will be provided by CPHS. Exempt status may include the following types of studies:

Research Using Publicly Available Data: Research involving publicly available data (e.g. census data, labor statistics, data available online) must be submitted to CPHS in iRIS for determination of Exemption.

Research Using Existing, De-identified Data: Research involving existing, de-identified data must be submitted to CPHS in iRIS for determination of Exemption.

Expedited Review: Research involving existing data sets with use of personal identifiers must be submitted for review by CPHS in iRIS.

Further Information about Exempt and Expedited review:

http://www.uthouston.edu/cphs/policies/index.htm

Training: All individuals participating in research that involves human subjects must receive appropriate training before initiating any research activities, and must receive updated training as necessary.

Courses that satisfy the UTHSC requirement for education on the protection of human subjects are
offered online by the Collaborative Institutional Training Initiative (CITI).

**Information about CITI:** http://www.uthouston.edu/cphs/for-researchers/training.htm

**Link to CITI:** https://www.citiprogram.org/

In addition to the above requirement, all principal investigators of sponsored projects must complete an online Investigator Briefing in the Responsible Conduct of Research. Further details on this requirement can be found at: http://www.uthouston.edu/evpara/investigator-briefing.htm

**Applications:** The UTHSC CPHS uses an online application. All applications, including those for studies that may be exempt from CPHS review, are submitted through iRIS, the Integrated Research Information System.

Register for iRIS training: http://www.uthouston.edu/cphs/for-researchers/reg-iris-training.htm

Basic iRIS instructions: http://www.uthouston.edu/cphs/for-researchers/basic-iris.htm

Log in to iRIS: http://iris.uth.tmc.edu
Care and Use of Animals

Center for Laboratory Animal Medicine and Care (CLAMC)

The CLAMC provides training related to the oversight, care and use of experimental animals, to ensure that the individuals involved in these activities are qualified to accomplish these tasks in a humane and scientifically acceptable manner.

CLAMC: http://www.uthouston.edu/animal-research/clamc.htm

Animal Welfare Committee (AWC)

All research using animal subjects or animal derived materials must be submitted to the AWC, the Institutional Animal Care and Use Committee, for the UTHSC. Faculty with approved animal use protocols must assure the AWC that personnel will be or are adequately trained. Training is provided through CLAMC.

AWC: http://www.uthouston.edu/animal-research/index.htm
Environmental Health and Safety

**Safety, Health, Environment and Risk Management (SHERM)**

Training in basic laboratory safety as well as radiation, chemical and biosafety is provided by SHERM.

SHERM: [http://www.uth.edu/safety/](http://www.uth.edu/safety/)

**Radiation Safety Committee**

Radiation Safety Committee approval must be obtained prior to the use of radioactive materials or other sources of radiation.

**Chemical Safety Committee**

Chemical Safety Committee approval must be obtained prior to using acutely toxic chemical agents, including those listed by the International Agency for Research on Cancer (IARC) or the National Toxicology Program (NTP) as suspected or confirmed carcinogens, or for which toxicological/epidemiological studies have indicated that the chemical has reproduction, acute, and/or reactive hazard(s). In addition, any hazardous chemical that is used in such a way as to present the potential for an exposure above the Occupational Safety and Health Administration's Permissible Exposure Limits (PEL) or the American Conference of Governmental Industrial Hygienist's Threshold Limit Values (TLV), requires committee review.

**Institutional Biosafety Committee**

Institutional Biosafety Committee approval must be obtained prior to using microbiological/infectious agents and/or recombinant DNA molecules in research.

Additional information about these Committees as well as application materials can be obtained at: [http://www.uthouston.edu/safety/manuals-and-forms.htm](http://www.uthouston.edu/safety/manuals-and-forms.htm)
Student Research

**Faculty Research:** Many UTSPH students participate in research that is being conducted by UTSPH faculty. A student’s involvement in such projects must be approved by all appropriate committees. In general, students can be added to an existing, approved protocol by submitting a change request to the appropriate committee.

**Classroom Projects:** Instructors who include a research project or analysis of existing research data for any purpose (e.g. to explore statistical methods or other methodological issues) as part of a course should obtain appropriate CPHS approvals. In general, applications for class projects that involve contact with, or analysis of data from human subjects should be submitted to CPHS (through iRIS), by the course instructor. Briefly, the application would include: the class objectives; types of research activities that will be included in the course; description of faculty oversight for the project; and an acknowledgement that any student activities that exceed the boundaries of the class would need to be submitted as individual projects (e.g. if a student where to expand a class project for use as a culminating experience). Students who wish to expand on a classroom project (e.g. for use in a written culminating experience) should contact CPHS to determine whether additional project approvals will be required. Questions regarding classroom projects should be directed to Cynthia Edmonds (Cynthia.L.Edmonds@uth.tmc.edu), Director of Research Support Services, UTHSC.

**Student Research:** Many UTSPH students engage in an independent research project, such as the MPH written culminating experience, MS thesis, and PhD/DrPH dissertation. As for all UTSPH research projects, student projects must be reviewed by the appropriate Institutional committees before the research is initiated.

It is the responsibility of the student and his/her research committee to determine which approvals are required and to apply for, obtain and maintain all such approvals. Ms. Rebecca Novak in the UTSPH is available to help students determine what approvals may be required for a specific project. However, the student should visit the appropriate website for the most up to date and complete information and/or contact the appropriate programmatic official in the UTHSC Office of Research to ensure that they have obtained the appropriate training and approvals before initiating their project. Students undertaking a written culminating experience, thesis or dissertation project must complete all required training and obtain all necessary committee approvals before their project will be approved by the UTSPH Associate Dean for Research.

In general, the approval processes for student projects are identical to those of faculty projects. However, if a student is conducting a project that falls under or is closely-related to an existing, UTHSC CPHS approved protocol, it may be possible for the study PI to obtain the appropriate approval for the student’s work by submitting a change request or protocol amendment for the existing approved protocol.
